

Lampiran 8. Contoh Perhitungan Konsentrasi Logam Berat Seng (Zn) dalam Sampel *Total Suspended Particulate* (TSP) di masing-masing Terminal

Perhitungan Konsentrasi Logam Berat Seng (Zn) dalam Sampel *Total Suspended Particulate* (TSP) di masing-masing Terminal dilakukan dengan pengenceran sebanyak 10 kali, sehingga perhitungan konsentrasi logam berat seng (Zn) menggunakan persamaan dibawah ini (**Pers 6**).

$$\text{Konsentrasi Zn} = \frac{(C_{TSP}) \times V_t \times \frac{S}{S_t}}{V} \times 10 \quad (\text{Pers.5})$$

a) Konsentrasi Zn di Terminal Giwangan

Contoh perhitungan konsentrasi logam berat seng (Zn) untuk sampel TSP 1 adalah sebagai berikut.

$$\begin{aligned} \text{Konsentrasi Zn}_1 &= \frac{C_{TSP\ 1} \times V_t \times \frac{S}{S_t}}{V} \times 10 \\ &= \frac{0,5024 \frac{\mu\text{g}}{\text{mL}} \times 50 \text{ mL} \times \frac{45600}{11400}}{390,32 \text{ m}^3} \times 10 \\ &= 2,57 \mu\text{g}/\text{m}^3 \end{aligned}$$

Dimana:

$$\begin{aligned} S &= \text{panjang} \times \text{lebar kertas filter} \\ &= 190 \text{ mm} \times 240 \text{ mm} \\ &= 45.600 \text{ mm}^2 \end{aligned}$$

$$\begin{aligned} S_t &= \text{panjang} \times \text{lebar filter sampel} \\ &= 95 \text{ mm} \times 120 \text{ mm} \\ &= 11.400 \text{ mm}^2 \end{aligned}$$

Contoh perhitungan konsentrasi logam berat seng (Zn) untuk sampel TSP 2 adalah sebagai berikut.

$$\begin{aligned} \text{Konsentrasi Zn}_2 &= \frac{C_{TSP\ 2} \times V_t \times \frac{S}{S_t}}{V} \times 10 \\ &= \frac{0,3176 \frac{\mu\text{g}}{\text{mL}} \times 50 \text{ mL} \times \frac{45600}{11400}}{390,32 \text{ m}^3} \times 10 \end{aligned}$$

$$= 1,63 \mu\text{g}/\text{m}^3$$

Dimana:

$$\begin{aligned} S &= \text{panjang} \times \text{lebar kertas filter} \\ &= 190 \text{ mm} \times 240 \text{ mm} \\ &= 45.600 \text{ mm}^2 \end{aligned}$$

$$\begin{aligned} St &= \text{panjang} \times \text{lebar filter sampel} \\ &= 95 \text{ mm} \times 120 \text{ mm} \\ &= 11.400 \text{ mm}^2 \end{aligned}$$

$$\begin{aligned} \text{Rata-Rata Konsentrasi } Zn_1 &= C_{Zn\ 1} + C_{Zn\ 1} \\ &= 2,57 \mu\text{g}/\text{m}^3 + 1,63 \mu\text{g}/\text{m}^3 \\ &= 2,10 \mu\text{g}/\text{m}^3 \end{aligned}$$

b) Konsentrasi Zn di Terminal Jombor

Contoh perhitungan konsentrasi logam berat seng (Zn) untuk sampel TSP 3 sebagai berikut.

$$\begin{aligned} \text{Konsentrasi } Zn_3 &= \frac{C_{TSP\ 3} \times V_t \times \frac{S}{St}}{V} \times 10 \\ &= \frac{0,5692 \frac{\mu\text{g}}{\text{mL}} \times 50 \text{ mL} \times \frac{45600}{11400}}{389,77 \text{ m}^3} \times 10 \\ &= 2,92 \mu\text{g}/\text{m}^3 \end{aligned}$$

Dimana:

$$\begin{aligned} S &= \text{panjang} \times \text{lebar kertas filter} \\ &= 190 \text{ mm} \times 240 \text{ mm} \\ &= 45.600 \text{ mm}^2 \end{aligned}$$

$$\begin{aligned} St &= \text{panjang} \times \text{lebar filter sampel} \\ &= 95 \text{ mm} \times 120 \text{ mm} \\ &= 11.400 \text{ mm}^2 \end{aligned}$$

$$\begin{aligned}
 \text{Konsentrasi } Zn_2 &= \frac{C_{TSP\ 2} \times V_t \times \frac{S}{St}}{V} \times 10 \\
 &= \frac{0,5173 \frac{\mu\text{g}}{\text{mL}} \times 50 \text{ mL} \times \frac{45600}{11400}}{390,32 \text{ m}^3} \times 10 \\
 &= 2,65 \mu\text{g}/\text{m}^3
 \end{aligned}$$

Dimana:

$$\begin{aligned}
 S &= \text{panjang} \times \text{lebar kertas filter} \\
 &= 190 \text{ mm} \times 240 \text{ mm} \\
 &= 45.600 \text{ mm}^2
 \end{aligned}$$

$$\begin{aligned}
 St &= \text{panjang} \times \text{lebar filter sampel} \\
 &= 95 \text{ mm} \times 120 \text{ mm} \\
 &= 11.400 \text{ mm}^2
 \end{aligned}$$

$$\begin{aligned}
 \text{Rata-Rata Konsentrasi } Zn_1 &= C_{Zn\ 1} + C_{Zn\ 1} \\
 &= 2,92 \mu\text{g}/\text{m}^3 + 2,65 \mu\text{g}/\text{m}^3 \\
 &= 2,79 \mu\text{g}/\text{m}^3
 \end{aligned}$$
