DAFTAR GAMBAR ................................................................................................................. xv
DAFTAR LAMPIRAN ............................................................................................................... xvii

BAB 1 PENDAHULUAN ........................................................................................................ 1
1.1 Latar Belakang ................................................................................................................. 1
1.2 Rumusan Masalah ............................................................................................................ 2
1.3 Tujuan Penelitian ............................................................................................................ 3
1.4 Manfaat penelitian ......................................................................................................... 3
1.5 Ruang Lingkup ................................................................................................................ 4

BAB II TINJAUAN PUSTAKA ........................................................................................... 5
2.1 Air Limbah Domestik ...................................................................................................... 5
2.2 IPAL Komunal .................................................................................................................. 8
2.3 Biofilter Aerobik .............................................................................................................. 10
2.4 Media Biofilter ................................................................................................................ 12
2.5 Down-flow Hanging Sponge .......................................................................................... 14
2.6 Media Polyurethane Sponge .......................................................................................... 14
2.7 Parameter ........................................................................................................................ 15
2.8 Penelitian Terdahulu ..................................................................................................... 16

BAB III METODE PENELITIAN ................................................................................. 19
3.1 Waktu dan Lokasi Penelitian ...................................................................................... 19
3.2 Alat dan Bahan Penelitian ............................................................................................ 19
3.3 Kerangka Penelitian ...................................................................................................... 20
3.3.1 Persiapan Alat dan Bahan ......................................................................................... 21
3.3.2 Tahap Seeding dan Aklimatisasi ............................................................................. 21
3.3.3 Tahap Pengoperasian Reaktor .............................................................................. 22
3.3.4 Pengambilan Sampling ........................................................................................... 23
3.3.5 Analisa Parameter ..................................................................................................... 24

BAB IV HASIL PENELITIAN DAN PEMBAHASAN .................................................... 26
4.1 Performa Unit Tray Bioreactor ...................................................................................... 26
4.2 Tahap Seeding dan Aklimatisasi ........................................................ 27
  4.2.1 Tahap Seeding ............................................................................. 27
  4.2.2 Tahap Aklimatisasi .................................................................... 28
4.3 Running Reaktor Tray Bioreactor ..................................................... 31
  4.3.1 Analisa Biochemical Oxygen Demand (BOD) ......................... 31
  4.3.2 Analisa Amonia (NH₃) ................................................................. 34
4.4 Kualitas Air Olahan Tray Bioreactor ................................................. 38
  4.4.1 Derajat Keasaman ..................................................................... 38
  4.4.2 Oksigen Terlarut (Dissolved Oxygen) .................................... 41
  4.4.3 Temperature dan Suhu (C) ......................................................... 42
  4.4.4 Kekeruhan (Turbidity) ............................................................... 45
4.5 Aplikasi Tray Bioreactor ................................................................. 47
4.6 Faktor – Faktor yang Mempengaruhi Performa Reaktor .............. 47
BAB V KESIMPULAN DAN SARAN ..................................................... 49
  5.1 Kesimpulan .................................................................................. 49
  5.2 Saran ............................................................................................ 49
DAFTAR PUSTAKA.................................................................................. 50
LAMPIRAN..................................................................................................... 54
