

ABSTRACT

A good creation architecture must have mission from the architect and can accepted to the society, environment and in this century. The mission or purpose are go with process and selection, include design appearance or the outer of design include social, culture, economic environment, etc. In this case, *the social, culture, economic environment area, become reference when design to choose the layout.* Observing process the environment and tourism potential that can be offering.

Village is one of the tourism potential that can attractive the tourist because have nature and comfort environment, and beside that it has culture value and interest social to be recreation place and natural adventure tourism. To achieve the creation can acceptable, the design must look physics potential and the social life and then both walked balance.

This design emphasize to the attraction tourism that support land use with *nature landscape that support by green development for creating conservation natural villages.*

Object to develop are the tourism village in Turi, Sleman exactly in Donoasih villages, with the specification are offering culture adventure tourism village, agriculture, animal husbandry, fishery, and support by the facilities. The design use villages landscape concept, basically nature applied on outer layout and landscape to easier tourist access and enjoyed the offering attraction. The base villages still maintain and keep nature conservation and culture.

Key words: Tourism Village, Eco-Tourism, Rural Landscape, Green Development, Environmental Conservation
