## **CHAPTER IV**

DATA SYNTHESIS AND ANALYSIS

ISLA

## 4.1 Data Synthesis

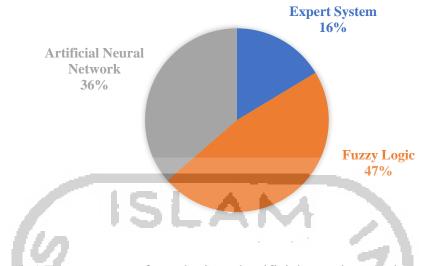

Figure 4. 1 Expert system, fuzzy logic and artificial neural network research article distribution

In Figure 4.1 shows the percentage of expert system, fuzzy logic and artificial neural network application fields from total 55 research articles. Fuzzy logic distributes most of the research articles with 47%, then artificial neural network with 36% and expert system with 16%. After findings the research articles based on expert system, fuzzy logic and artificial neural network, then the research articles are classified into their type of industry, service or manufacturing industry. Figure 4.2 below will show the application field of the research articles.

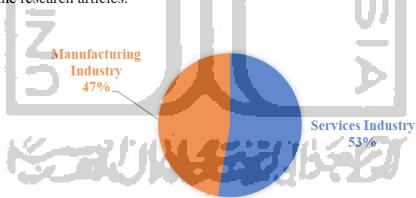

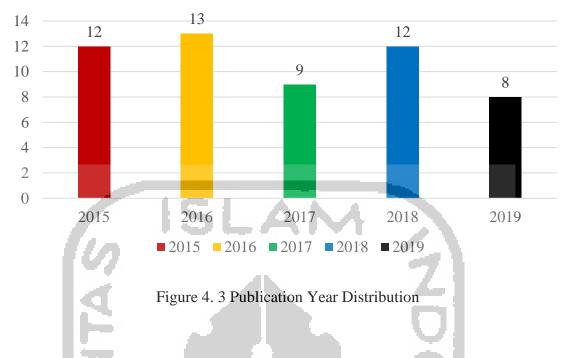

Figure 4. 2 Application field research article distribution

Figure 4.2 above shows the percentage of expert system, fuzzy logic and artificial neural network application fields from the total 55 research articles. Manufacturing industry with 47% and service industry 53%.

The research articles are derived from the 2015 until 2019. Publication year of the research articles are illustrated on the figure 4.3 above. From year 2015 with 13 research articles, 11 research articles from 2016, 7 research articles from year 2017, 13 research articles from year 2018 and 11 research articles from 2019. Then, figure 4.4 below shows the publication journal distribution on this research.

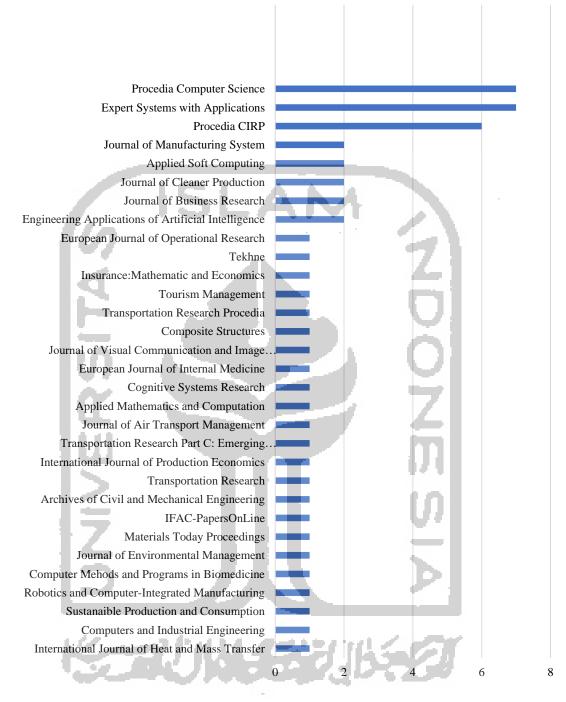

Figure 4. 4 Publication Journal Distribution

Figure 4.2 above shows the publication of research articles that applied. Procedia Computer Science and Expert System with Application contribute 7 research articles, 6 research articles from Procedia CIRP, 2 research articles from Journal of Business Research, Journal of Manufacturing System, Applied Soft Computing and Journal of Cleaner Production. Then, other publications have 1 research article distribution.

## 4.2 Data Analysis

From total number of 55 research articles that selected with selected criteria, the research articles are classified into each application of expert system, fuzzy logic and artificial neural network. Then, these 55 research articles will be analysed based on their artificial intelligence rule, artificial intelligence main tool and additional tool on each research article. Each research article will be analysed briefly below,

	Table 4. 1 Artificial Intelligent Application
