

CHAPTER V

CONCLUSION

The aim of this research is to identify the online reading strategies used by the high school students in Yogyakarta. It is concluded from the result that the first research question found that problem solving strategies is the most frequently used strategies (Mean=3,379747), global strategies with the second position (Mean: 3,251356) and support strategies at the last position (Mean:2,775769). Based on the the result, The researcher recommend the educational institutions to consider their students' online reading strategies and considering which kind of online text to use to apply online reading activities to the students. However, the result on the factor of similarity result on online reading strategies between rural area context and urban area context has not investigated in this study. Hence, the research on the factor is necessary to be conducted in the future studies.
