Today hospital is a place for diagnostic, treatment and study of the machine- the human body. It's also a place for healing and hope not despair and containment for large amount people that having strenght link with this milieu, i.e : patient, medical staf and visitor.

More attention is being paid to psychological needs. It means how human mind affects the healing of human body from his or her environment.

Architecture as human environment in hospital milieu having specific characteristic, the community, mechanisme and regularity of medical activities making this milieu as a stressful environment.

Hospital with open concept, humanistic, hospitality as desires to create therapeutic atmosphere, to support a productive medical staf more cooperate and humanism people.

The aspect of colour , texrural pattern, shape configuration and lighting, influenced human mind and space by preception, i.e : a rational and active process getting information from our environment by human brain.

Giving home like with natural environment by atrium or landscaping pass through the building and could be seen by users as another way to giving therapeutic atmosphere from natural environment.
