

Lampiran 1 : Rekap perhitungan kebutuhan tendon struktur *box girder prestressed* bentang 50 meter

Semakin tinggi penampang *box girder prestressed* yang digunakan maka akan berpengaruh dengan semakin sedikitnya kebutuhan tendon yang digunakan. Hal tersebut dapat dilihat pada Tabel 1 – Tabel 4.

Tabel 1 Jumlah *strands box girder* h = 2,6 m, $f'c = 49,8$ mpa dan $z_0 = 0,3$

Jumlah tendon yang dibutuhkan				28,3766		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Tabel 2 Jumlah *strands box girder* h = 2,4 m, $f'c = 49,8$ mpa dan $z_0 = 0,3$

Jumlah tendon yang dibutuhkan				28,5628		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Tabel 3 Jumlah *strands box girder* h = 2,2 m, $f'c = 49,8$ mpa dan $z_0 = 0,3$

Jumlah tendon yang dibutuhkan				28,8701		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Tabel 4 Jumlah *strands box girder* h = 2 m, $f'c = 49,8$ mpa dan $z_0 = 0,3$

Jumlah tendon yang dibutuhkan				29,3537		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Semakin tinggi nilai z_0 yang digunakan maka akan semakin kecil nilai eksentrisitas tendon yang diijinkan. Sehingga hal itu dapat berakibat pada semakin banyaknya tendon yang dibutuhkan untuk mencapai nilai eksentrisitas yang kecil. Seperti dapat dilihat pada Tabel 5 – Tabel 7.

Tabel 5 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 49,8$ mpa dan $z_0 = 0,45$

Jumlah tendon yang dibutuhkan				31,1739		buah	
$n_{s1} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	32	tendon	Jumlah <i>strands</i> , $n_s =$		640	<i>strands</i>	

Tabel 6 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 49,8$ mpa dan $z_0 = 0,3$

Jumlah tendon yang dibutuhkan				28,3766		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Tabel 7 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 49,8$ mpa dan $z_0 = 0,17$

Jumlah tendon yang dibutuhkan				26,3290		buah	
$n_{s1} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	28	tendon	Jumlah <i>strands</i> , $n_s =$		560	<i>strands</i>	

Semakin tinggi mutu beton *box girder prestressed* yang digunakan maka akan berpengaruh dengan semakin sedikit dan banyak kebutuhan tendon yang digunakan. Hal itu dapat dipengaruhi sebagai asumsi keadaan kekuatan mutu beton saat transfer gaya prategang. Hal tersebut dapat dilihat pada Tabel 8 – Tabel 11.

Pada Tabel 8 – Tabel 11.dapat dilihat bahwa kebutuhan tendon akan semakin naik dengan bertambahnya mutu. Dikarenakan sebagai pengaruh kuat tekan yang digunakan saat transfer gaya beban merupakan kuat ijin dari *box girder* sehingga akan semakin naik nilainya dengan bertambahnya mutu. Sehingga

dengan semakin bertambahnya jumlah tendon dan mutu beton maka akan terjadi suatu perencanaan yang berlebih pada momen kapasitas sebuah struktur atas beban yang terjadi.

Tabel 8 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 66,4$ MPa dan $z_0 = 0,45$ m

Jumlah tendon yang dibutuhkan				37,4916		buah	
$n_{s1} =$	10	tendon	20	<i>strands</i> /tendon =	200	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	9	tendon	20	<i>strands</i> /tendon =	180	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	9	tendon	20	<i>strands</i> /tendon =	180	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	10	tendon	20	<i>strands</i> /tendon =	200	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	38	tendon	Jumlah <i>strands</i> , $n_s =$		760	<i>strands</i>	

Tabel 9 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 58,1$ MPa dan $z_0 = 0,45$ m

Jumlah tendon yang dibutuhkan				34,3328		buah	
$n_{s1} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	7	tendon	20	<i>strands</i> /tendon =	140	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	35	tendon	Jumlah <i>strands</i> , $n_s =$		700	<i>strands</i>	

Tabel 10 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 49,8$ MPa dan $z_0 = 0,45$ m

Jumlah tendon yang dibutuhkan				31,1739		buah	
$n_{s1} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	8	tendon	20	<i>strands</i> /tendon =	160	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	32	tendon	Jumlah <i>strands</i> , $n_s =$		640	<i>strands</i>	

Tabel 11 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 41,5$ MPa dan $z_0 = 0,3$ m

Jumlah tendon yang dibutuhkan				28,30151		buah	
$n_{s1} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s2} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s3} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s4} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_{s5} =$	6	tendon	20	<i>strands</i> /tendon =	120	<i>strands</i> dg selubung tendon =	76,2 mm
$n_t =$	30	tendon	Jumlah <i>strands</i> , $n_s =$		600	<i>strands</i>	

Pada Tabel 12 – Tabel 15 dapat dilihat bahwa kebutuhan tendon akan semakin turun dengan bertambahnya mutu. Dikraenakan sebagai pengaruh kuat tekan yang digunakan saat transfer gaya beban merupakan kuat beton yang berada di bawah kuat tekan yang direncanakan dari *box girder* sehingga akan semakin

turun nilainya. Sehingga dengan semakin berkurangnya jumlah tendon dan mutu beton maka akan terjadi suatu perencanaan yang mendekati sama dan efisien pada nilai momen kapasitas sebuah struktur atas beban yang terjadi.

Tabel 12 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 66,4$ MPa dan $z_0 = 0,17$ m

Jumlah tendon yang dibutuhkan				26,8733		buah	
$n_{s1} =$	9	tendon	20	$strands/tendon =$	180	$strands$ dg selubung tendon =	76,2 mm
$n_{s2} =$	9	tendon	20	$strands/tendon =$	180	$strands$ dg selubung tendon =	76,2 mm
$n_{s3} =$	9	tendon	20	$strands/tendon =$	180	$strands$ dg selubung tendon =	76,2 mm
$n_t =$	27	tendon	Jumlah <i>strands</i> , $n_s =$		540	<i>strands</i>	

Tabel 13 Jumlah *strands box girder* $h = 2,6$ m, $f'c = 58,1$ MPa dan $z_0 = 0,45$ m

Jumlah tendon yang dibutuhkan				27,2539		buah	
$n_{s1} =$	7	tendon	20	$strands/tendon =$	140	$strands$ dg selubung tendon =	76,2 mm
$n_{s2} =$	7	tendon	20	$strands/tendon =$	140	$strands$ dg selubung tendon =	76,2 mm
