## **ABSTRACT**

The importance of implementing new habits in the new normal era of covid-19. The public is asked to follow health protocols and vaccinate as one of the ways to prevent Covid-19. This study aims to describe the knowledge, attitudes of the Pongkai Istiqomah community towards the Covid-19 vaccine and their behavior towards the application of health protocols. This research is a quantitative descriptive study with a survey method carried out in Pongkai Istiqomah Kampar Village. Researchers used a questionnaire as an instrument to collect data. The questionnaires used included questionnaires and attitudes about the Covid-19 vaccine, as well as a public behavior questionnaire regarding the implementation of health protocols. Sampling with a target respondent of 251 people, selected using accidental sampling technique and analyzed using descriptive analysis method. Results based on this study, it was found that 59.4% of the people had good knowledge regarding the Covid-19 vaccine, while the other 40.6% were not good. As many as 50.6% of the public also have a good attitude towards the Covid-19 vaccine, while the other 49.4% are not good. In line with the knowledge and attitudes, 53.4% of the people already have good behavior towards the Covid-19 health protocol, while 46.6% are still not good.
