KATA PENGANTAR

Puji syukur penulis panjatkan kepada Allah Subhanahu wata'ala, sehingga penulis dapat menyelesaikan Tesis yang berjudul Desain Dashboard Manajemen Persediaan Spare Parts Sepeda Motor Honda. Tesis ini merupakan salah satu syarat akademik dalam menyelesaikan studi tingkat Magister di Program Studi Magister Teknik Industri, Fakultas Teknologi Industri, Universitas Islam Indonesia, Yogyakarta.

Dalam penyusunan Tesis ini terdapat hambatan yang dihadapi penulis, namun berkat saran dan masukan, serta dorongan semangat dari beberapa pihak, Alhamdulillah Tesis ini dapat terselesaikan. Berkaitan dengan ini penulis ingin mengucapkan Terimakasih yang sedalam-dalamnya kepada:

1. Bapak Prof. Dr. Ir. Hari Purnomo, M.T. selaku Dekan Fakultas Teknologi Industri Universitas Islam Indonesia.
2. Bapak Winda Nur Cahyo, S.T., M.T., Ph.D. selaku Ketua Program Magister Teknik Industri Fakultas Teknologi Industri Universitas Islam Indonesia.
3. Bapak Dr. Taufik Immawan, S.T., M.M dan Agus Mansur, S.T., M.Eng.Sc selaku Dosen Pembimbing Tesis yang telah memberikan bimbingan dan arahan kepada penulis.
4. Bapak/Ibu Dosen Magister Teknik Industri UII yang telah memberikan ilmu yang berharga.
5. AHASS Bintang Mulia Jaya Motor Palembang yang telah memberikan izin dan membantu saya dalam melakukan penelitian.
6. Suami, anak dan keluarga tercinta yang selalu mendoakan dan memberikan dukungan sehingga saya dapat menyelesaikan Tesis ini.
7. Teman-teman keluarga besar Magister Teknik Industri angkatan 26 yang telah membantu support dalam pembuatan tesis ini.
8. Rekan-rekan kampus UM Palembang yang turut memberikan support dalam menyelesaikan tesis ini.

Akhinya penulis berharap agar Tesis ini dapat bermanfaat bagi berbagai pihak yang terkait.

Yogyakarta, 26 Agustus 2022

Penulis,

Nidya Wisudawati

SURAT PERNYATAAN KEASLIAN TUGAS AKHIR

Demi Allah, saya akui karya ini adalah hasil kerja saya sendiri kecuali bagian tinjauan pustaka yang setiap sumbernya telah saya sebutkan dan lampirkan sumbernya. Jika dikemudian hari ternyata terbukti pengakuan saya ini tidak benar dan melanggar aturan yang sah dalam karya tulis dan hak kekayaan intelektual maka saya bersedia ijazah yang saya terima untuk ditarik kembali oleh Universitas Islam Indonesia.

ABSTRAK

DESAIN DASHBOARD MANAJEMEN PERSEDIAAN SPARE PARTS SEPEDA MOTOR HONDA

Nidya Wisudawati
18916010

Pada praktiknya, dunia industri seperti industri jasa mengharuskan pelakunya untuk banyak melakukan peningkatan kualitas agar dapat bersaing. Perkembangannya yang begitu pesat membuat banyak pelaku usaha menggunakan trik khusus untuk menjalankan usahanya. Begitu juga dengan pelaku usaha dari bengkel servis dan jasa sepeda motor yaitu AHASS Bintang Mulia Jaya Motor Palembang. Persediaan spare part yang harus selalu ada ketika pelanggan membutuhkannya merupakan daya tarik utama bagi setiap bengkel. Namun kenyataannya, belum ada teknik manajemen sediaan khusus yang dapat membantu part man untuk memesan spare parts pada bulan berikutnya. Maka dari itu penelitian ini akan mendesain dashboard manajemen persediaan spare part sepeda motor Honda yang dapat mengendalikan jumlah stok spare part dan membantu memprediksi kebutuhan spare part tiap bulannya dengan teknik peramalan yang digunakan yaitu metode Single Exponential Smoothing (SES). Hasil yang diberikan dari sistem ini berupa suggestion stok spare part dengan tampilan menarik yang user friendly sehingga dapat meningkatkan kinerja partman dan menjaga kredibilitas.

Kata Kunci: *Dashboard, spare parts, SES*

BAB 1

PENDAHULUAN

1.1 Latar Belakang

PT Astra Honda Motor merupakan pelopor industri sepeda motor di Indonesia dengan *brand* merk produk Honda. Tim penjualan sepeda motor dan *spare part genuine* Honda tersebar di 29 *main dealer* dan salah satunya terdapat di Palembang (Astra Motor Sumsel) sedangkan untuk kebutuhan layanan purnajual dapat melalui bengkel sepeda motor honda yang dikenal dengan “AHASS”. *Astra Honda Authorized Service Station* (AHASS) melayani *showroom* penjualan (H1), layanan servis (H2) dan gerai suku cadang (H3). Sebagai bengkel resmi Honda di Indonesia, AHASS bergerak dibidang jasa bengkel motor yang keberadaannya sangat dibutuhkan oleh pengguna motor Honda untuk merawat dan memperbaiki kendaraannya. Salah satu yang menjadi daya tarik konsumen ialah lengkapnya produk *spare part* yang diinginkan oleh konsumen tersebut. Disisi pengelola dan pemilik bengkel, laba dan lancarnya *cash flow* adalah keinginan terbesar setiap saatnya. Keinginan tersebut dapat diperoleh salah satunya dengan menjaga *service level* dari keandalan bengkel mengelola ketersediaan stok *spare parts* mereka. Produk dan jasa tidak dapat dipisah lagi dan dapat dievaluasi sebagai bagian dari keseluruhan pola penggunaan yang sesuai dengan kehidupan konsumen (Syafarudin & Yuliasih, 2020).

Setiap AHASS dibekali dengan “AHASS Sistem” dimana data terkait seperti *database* konsumen, stok *spare parts*, data transaksi hingga absen mekanik tersedia disana. Namun AHASS Sistem ini hanya bersifat sebagai *database* yang tidak memungkinkan bagi pekerja bengkel untuk mengolah datanya. AHASS Sistem dipegang oleh pekerja yang bertugas sebagai kasir sekaligus *partman* (orang yang bertugas mengurus *spare part*) dan *partsales* (orang yang bertugas menjual *spare part*). Ada lebih dari 800 *item spare parts* yang tersedia di AHASS sehingga tidak mudah bagi *partman* untuk mengetahui *item* mana yang perlu diperhatikan stoknya. Hal ini membuat *shortage* untuk beberapa *item spare part* sering terjadi dan ketidakmampuan AHASS melihat itu dari sistem yang ada. AHASS hanya dapat melakukan *fixed order spare part* di *main dealer* dengan jangka waktu satu bulan sekali disetiap awal bulannya dengan *partman* sebagai pengambil keputusan tanpa dasar pertimbangan pemesanan yang detail. Pada

proses yang sedang berjalan nyatanya *partman* hanya mengandalkan pengalaman ataupun kemampuan mengingatnya.

Hal tersebut diatas merupakan risiko spekulatif yang dapat dicegah sehingga tidak menimbulkan kerugian. Terdapat beberapa kerugian yang ditimbulkan akibat tidak selalu tersedianya *spare parts* yaitu hilangnya loyalitas konsumen akibat produk *spare part* yang kurang lengkap, *service level* yang rendah, besarnya ongkos penyimpanan *spare part* dan macetnya *cash flow* akibat *dead stock* dan *over stock* (Ozbay et al., 2019). Menurut Das Roy et al., (2011), melakukan manajemen sediaan yang tepat membuat perusahaan bukan hanya dapat meminimalkan biaya tapi juga dapat memaksimalkan laba.

Sistem yang berjalan saat ini di AHASS masih sebatas database sehingga diperoleh hasil wawancara lapangan terhadap *user* dimana kebutuhan yang diperlukan diantaranya adalah terdapat sistem yang dapat memberikan daftar kesimpulan *spare parts* apa saja yang akan dipesan untuk kebutuhan bulan mendatang, sistem yang mudah dioperasikan, serta terhubung dengan AHASS Sistem. Berdasarkan hal tersebut maka dirancang sebuah *dashboard* sistem pengendalian persediaan barang berbasis web yang diharapkan *user friendly* dan tidak terbatas pada kapasitas *hardware* yang ada. Dashboard dirasa mampu untuk digunakan sebagai pemantauan, perencanaan dan komunikasi. Dashboard juga diperuntukkan untuk perencanaan dengan melakukan analisis yang ada di antara fitur-fiturnya. Salah satu fitur yang akan dirancang ialah pemenuhan kebutuhan *spare parts* dengan melakukan peramalan. Namun dalam memilih metode peramalan maka terlebih dahulu diperlukan pengumpulan data dan melihat pola dari data tersebut (Hyndman & Athanasopoulos, 2018) (Heizer & Render, 2014). Metode peramalan model normal seperti *simple moving average*, *exponential smoothing* dan *holt's and winter exponential* biasa diterapkan untuk *automotive parts* (Bacchetti & Saccani, 2012) (Udom & Phumchusri, 2014).

Beberapa penelitian sebelumnya yang juga meneliti sistem persediaan barang seperti dalam Bacchetti & Saccani (2012) yang melakukan studi teoritis mengenai klasifikasi dan perkiraan permintaan *spare part* untuk pengendalian stok. Hemeimat et al. (2016) membandingkan lima jenis peramalan untuk permintaan *spare parts* di pabrik kertas. Ozbay et al. (2019) mengembangkan Decision Support System (DSS) untuk meramalkan kebutuhan *spare parts* di industri elektronik. Wahyuniardi et al. (2013) menganalisis pengendalian persediaan bahan baku di industri *frozen food* menggunakan metode P dan Q. Beberapa penelitian mengenai pengendalian persediaan *spare part* juga

telah dilakukan oleh Delvika (2011), Nisa et al. (2020), Listiyono (2020), Prihartiningtyas (2021), Ula Banati (2018), Indriastiningsih & Darmawan (2019) dan Musrifah & Muthohir (2014). Tujuan yang ingin dicapai oleh beberapa peneliti yang dibahas sebelum ini serupa, yaitu untuk menjaga *service level* tetap tinggi dan mengoptimalkan biaya inventori. Namun pemecahan masalah yang diberikan mayoritas hanya bisa dipakai untuk satu waktu saja. Maka diperlukan sebuah *dashboard* sebagai aplikasi sistem informasi yang dapat digunakan oleh AHASS sebagai bentuk pengendalian persediaan *spare part* kedepannya.

Secara simultan sistem informasi persediaan *spare part* diharapkan dapat meminimalisir kesalahan pemesanan *spare parts* dan *user friendly*. Berdasarkan uraian masalah diatas, maka penulis mengambil tema penelitian “Desain Dashboard Manajemen Persediaan Spare Parts Sepeda Motor Honda”.

1.2 Rumusan Masalah

Berdasarkan latar belakang yang ada maka rumusan masalah pada penelitian ini adalah bagaimana desain *dashboard* manajemen persediaan yang sesuai dengan kebutuhan bengkel sepeda motor Honda.

1.3 Tujuan Penelitian

Berdasarkan rumusan masalah yang telah ditentukan sebelumnya, dapat ditentukan tujuan penelitian ini yaitu untuk mendapatkan rancangan dashboard yang dapat meminimalisir kesalahan pemesanan kebutuhan *spare parts* dan membuat *dashboard* yang *user friendly*.

1.4 Manfaat Penelitian

Adapun manfaat dalam penelitian ini adalah desain dashboard dapat menjadi alat bantu untuk memudahkan user dalam menjaga persediaan *spare parts*.

1.5 Batasan Penelitian

Agar permasalahan tidak menyimpang dari tujuan, maka pembahasan dalam penelitian ini perlu memiliki batasan yaitu objek penelitian ini dilakukan di AHASS Bintang Mulia Jaya Motor Palembang dan data yang digunakan adalah data penjualan *spare parts* per bulan mulai januari 2022 hingga juni 2022.

BAB 2

TINJAUAN PUSTAKA

2.1 Kajian Induktif

Peneliti melakukan studi pustaka mengenai sistem persediaan dengan membandingkan penelitian yang akan dilakukan dengan penelitian sebelumnya. Adapun penelitian sebelumnya sebagai berikut:

Hemeimat et al. (2016) dalam penelitiannya menyatakan bahwa spare parts memiliki pengaruh besar pada dunia industry sehingga diperlukan analisis permintaan spare parts dan memperkirakan pemakaiannya dimasa depan. Namun kesulitan dihadapi dalam menemukan metode peramalan yang optimal untuk menanggapi permintaan spare parts. Terdapat lima metode peramalan yang dibandingkan berdasarkan tiga alat statistic yaitu Mean Squared Error (MSE), Mean Absolute Deviation (MAD) dan Mean Error (ME). Dengan pertimbangan pola permintaan spare part yang lumpy dan intermittent, menyebabkan pertimbangan metode peramalan yang berbeda termasuk: Moving Average, Exponential Smoothing, Croston, Syntetos-Boylan dan Teunter-Syntetos-Babai. Hasil menunjukkan bahwa Moving Average memiliki nilai eror terkecil disusul dengan Exponential Smoothing dan Teunter-Syntetos- Babai.

Ozbay et al. (2019) mengembangkan sistem informasi Decision Support System (DSS) untuk memperkirakan permintaan spare parts pada perusahaan elektronik dengan studi kasus televisi di Turki. Tujuan dari penelitian ini adalah untuk meningkatkan kepuasan pelanggan, mengoptimalkan stok yang disimpan dan mengurangi biaya. Sistem peramalan yang berjalan diperusahaan ini bersifat kualitatif yaitu didasarkan pada pengalaman personel. Pendekatan dengan tiga metode telah dilakukan yaitu Winter's, Double Exponential Smoothing dan Moving Average. Didapatkan hasil yaitu terjadi peningkatan penjualan spare parts sebesar 47,97% dengan metode Winter dan Double Exponential Smoothing.

Wahyuniardi et al. (2013) melakukan perbandingan antara 2 model yaitu Model P dan Model Q untuk menganalisis sistem pengendalian persediaan bahan baku di industry frozen food. Setelah dilakukan perbandingan hasil perhitungan menggunakan kedua model tersebut maka didapat metode pengendalian persediaan bahan baku yang paling murah untuk sistem persediaan bahan baku industri ini adalah metode Q

(Economic Order Quantity) dengan biaya total sebesar Rp. 4.076.800.660,85. Jumlah sekali pesan selama tahun 2012 untuk Shoestring adalah 18.437 kg, Crinkle 15.441 kg, Batter coated 8.689 kg, Mix vegetable 10.637 kg, Corn kernel 5.157 kg, dan Green peas 5.920 kg.

Musrifah & Muthohir (2014) telah merancang suatu sistem informasi persediaan suku cadang pada AHASS 2106 Waras Motor Gemuh berbasis PHP dan MySQL. Tujuan dari penelitian ini adalah untuk meminimumkan kesalahan dalam hal pengendalian persediaan, transaksi penjualan dan pembelian, memudahkan melihat persediaan serta pergerakan barang dan pencetakan faktur penjualan. Masalah belum adanya sistem terkomputerisasi pada saat itu membuat penelitian ini dapat membantu AHASS mengatasi permasalahan sistem informasi persediaan suku cadangnya.

Gusriza (2014) dalam penelitiannya yang berjudul sistem pengendalian persediaan alat kesehatan di dinas kesehatan kota Bandung menggunakan metode ABC memiliki tujuan untuk mengetahui banyaknya alat Kesehatan yang akan disediakan untuk satu tahun. Peramalan persediaan alat Kesehatan dilakukan menggunakan forecasting single exponential smoothing dimana Vaccine Carrier Imunisasi sebaiknya dalam pengadaan alat kesehatan tahunan di Dinas Kesehatan Bandung pada periode 2014 adalah 3.86033 atau dibulatkan 4 unit Vaccine Carrier Imunisasi dengan \sum Deviasi Terkecil - 3.12663, Nilai MAD sebesar -0.521105, nilai forecast error adalah 138.12663 pada alpha 0.9. Lalu pengklasifikasian dilakukan menggunakan metode ABC dimana dibagi menjadi tiga kalsifikasi dengan basis volume Rupiah tahunan. Dental unit dan lemari es masuk ke kategori A, dental chair masuk ke kategori B serta gynaecolog bed dan emergency kit masuk ke kategori C.

Kumala et al. (2016) dalam penelitiannya yaitu optimasi persediaan spare part untuk meningkatkan total penjualan dengan menggunakan simulasi monte carlo. Spare part yang diteliti hanya pada kategori fast moving tertinggi yaitu air cleaner, oil filter dan spark plug. Dengan memperhatikan reorder point dan safety stock, hasil dari simulasi monte carlo menjanjikan peningkatan total penjualan yang dilihat berdasarkan keuntungan tiap bulannya. Pada tahun 2013 hingga Juni 2015, peningkatan tertinggi sebesar 2,622% dan peningkatan terendah sebesar 0,117%.

Putra (2019) membuat rancang bangun sistem informasi penjualan spare part sepeda motor berbasis web. Tujuan yang ingin dicapai dalam penelitian ini adalah mengurangi risiko kesalahan dalam pencatatan data. Hasilnya yaitu sebuah sistem yang

dapat diakses secara realtime melalui website serta dapat melakukan transaksi pembelian, penjualan, dan persediaan produk secara online berbasis web.

Sriwana et al. (2018) melakukan penelitian yang berjudul perancangan sistem informasi inventory PT. ABC. Tujuan yang ingin dicapai adalah untuk menganalisa dan merancang sebuah sistem inventori berbasis web yang dapat menyajikan informasi yang dibutuhkan oleh top management dan staf perusahaan agar dapat mengetahui dan mengendalikan jumlah stock barang yang terdapat dalam gudang. Alat pengembangan yang digunakan penelitian ini menggunakan PHP sebagai bahasa pemrograman dan MySQL sebagai manajemen database sistem inventori serta menggunakan bantuan software ArgoUML. Efisiensi waktu, tenaga dan produktivitas perusahaan menjadi meningkat dengan adanya sistem informasi inventori tersebut.

Indriastiningsih & Darmawan (2019) melakukan analisis pengendalian persediaan spare part motor honda beat dengan menggunakan metode EOQ menggunakan peramalan penjualan pada graha karya AHASS XY. Hasil dari penelitian, forecasting yang cocok untuk digunakan adalah forecasting Trend Linier dan menggunakan aplikasi POM-QM windwos 5 dengan hasil Oli Mesin MPX1 Lt adalah 20 botol, VBELT 4 unit, kanvas rem 15 unit, oli gardan 4 unit, dan bohlam rem 7 unit. Dan untuk hasil pengendalian persediaan menggunakan metode EOQ, Oli Mesin MPX1 Lt 23 hari sekali, VBELT 36 hari sekali, kanvas rem 23 hari sekali, Oli Gardan 26 hari sekali, bohlam rem 30 hari sekali.

Murti et al. (2020) dalam penelitiannya yang berjudul pengembangan sistem informasi manajer suku cadang sepeda motor berbasis web di bengkel Benny Motor berhasil membuat pekerjaan dalam pencatatan dan penghitungan transaksi pembayaran servis motor dan penjualan spare part yang awalnya masih manual menjadi berbasis web sehingga menjadi semakin mudah. Metode yang digunakan adalah dengan pengembangan metode waterfall.

2.2 Kajian Deduktif

Kajian deduktif digunakan sebagai acuan dari teori-teori dan prinsip yang sesuai dengan permasalahan yang terlibat dalam penelitian:

2.2.1 Manajemen Persediaan

Persediaan adalah termasuk salah satu harta lancar (*current assets*) perusahaan dimana keberadaannya merupakan keterpaksaan karena adanya ketidakpastian pasok dan ketidakpastian permintaan. Manajemen persediaan adalah metode yang mengatur persediaan barang yang dimiliki perusahaan yang meliputi cara mendapatkan, penyimpanan barang, bagaimana cara pemanfaatan, dan cara mengeluarkan barang tersebut. Persediaan memiliki peran ganda yang saling konflik, yaitu harus berperan agar bisa mencapai responsivitas tinggi dengan cara melakukan persediaan yang besar pada setiap simpul agar mampu merespon spektrum pelayanan berikut (Prof. Dr. Ir. H. Sutarman, 2017):

1. Permintaan yang berfluktuasi,
2. *Lead time* yang pendek,
3. Menangani produk bervariasi,
4. Membangun produk inovasi, dan
5. Memenuhi *service level* yang tinggi.

Diperlukan keterampilan manajerial dalam mengatur persediaan agar terencana dan dapat dikendalikan dengan baik yang akan berdampak terhadap keamanan *cash flow* dan tingkat pengembalian (*return on investment*) perusahaan. Keterampilan dimaksud adalah bagaimana pihak perusahaan dapat mengatur keseimbangan antara persediaan dengan *customer service* sebab saat ini banyak perusahaan berusaha untuk mengurangi persediaan hingga tingkat tertentu untuk meningkatkan efisiensi tapi dipihak lain pelayanan kepada pelanggan menjadi menurun karena banyak pelanggan tidak terlayani sebagai akibat dari kekurangan stok. Sebaliknya jangan sampai perusahaan melayani pelanggan pada tingkat pelayanan sangat tinggi yang menyediakan stok besar dengan alasan agar pelanggan puas namun aksi ini berisiko karena berdampak inefisien dan perusahaan akan menghadapi permasalahan besar dalam memelihara likuiditasnya. Tujuan utama manajemen persediaan adalah untuk menjaga persediaan barang yang tersimpan cukup stabil sehingga tidak mengganggu proses produksi. Tujuan lainnya yaitu memastikan bahan baku yang tersedia untuk produksi dalam jumlah yang aman, memberi waktu perusahaan untuk mengelola pembelian bahan baku, mengantisipasi perubahan permintaan dan penawaran barang produksi, mengurangi risiko bahan baku datang

terlambat, menyesuaikan jadwal produksi barang dan mengantisipasi risiko kenaikan bahan baku.

2.2.2 Tujuan Persediaan

Menurut Sumayang (2003) menyatakan bahwa tujuan utama dari persediaan bahan baku adalah menghubungkan pemasok dengan pabrik. Demikian juga persediaan barang dalam proses dan persediaan barang jadi. Ada tiga alasan mengapa *inventory* dibutuhkan:

1. Menghilangkan pengaruh ketidakpastian
Untuk menghadapi ketidakpastian maka pada sistem *inventory* ditetapkan persediaan darurat yang dinamakan *safety stock*.
2. Memberi waktu luang untuk pengelolaan produksi dan pembelian
Kadang-kadang lebih ekonomis memproduksi barang dalam proses atau barang jadi dalam jumlah besar atau dalam jumlah paket yang kemudian disimpan sebagai persediaan. Selama persediaan masih ada maka proses produksi dihentikan dan akan dimulai lagi bila diketahui persediaan hampir habis.
3. Untuk mengantisipasi perubahan pada *demand* dan *supply*
Inventory disiapkan untuk menghadapi beberapa kondisi yang menunjukkan perubahan *demand* dan *supply*.

2.2.3 Sasaran Pengelolaan Persediaan

Sehubungan persediaan adalah aset yang harus direncanakan dan dikendalikan dengan ketat agar tidak terjadi kekurangan atau berlebihan, maka dalam upaya pengelolaan tersebut memerlukan ongkos yang cukup besar. Atas dasar alasan tersebut besarnya ukuran persediaan harus dilakukan optimasi agar tingkat pelayanan kepada pelanggan dapat terjaga namun diimbangi dengan total ongkos yang minimum. Dengan demikian, sasaran manajemen persediaan adalah (Prof. Dr. Ir. H. Sutarman, 2017):

1. Mengurangi investasi dalam persediaan
Apabila komponen persediaan pada harta lancar terlalu tinggi akan berdampak pada rendahnya tingkat likuiditas keuangan perusahaan. Oleh sebab itu dengan melakukan manajemen persediaan yang bijak akan mampu mengendalikan besarnya investasi dibidang persediaan sehingga jumlahnya tidak berlebihan.

2. Memaksimumkan pelayanan kepada pelanggan

Harapan pelanggan terhadap perusahaan adalah agar senantiasa dapat terpenuhinya permintaan terhadap produk saat mereka memerlukannya. Harapan tersebut harus selalu direalisasikan oleh pihak perusahaan agar pelanggan tidak terjadi *back order* apalagi terjadi *lost sales*. *Lost sales* adalah kondisi yang sangat tidak diharapkan karena terjadi kehilangan kesempatan untuk menjual dan hilangnya potensi keuntungan yang dapat diraih. Berdasarkan deskripsi tersebut tingkat ketersediaan (*availability*) produk yang diminta pelanggan harus tetap dijaga dan dipertahankan melalui manajemen persediaan yang bijak agar *level of service* untuk pelanggan tetap tinggi.

3. Menjamin operasi yang efisien

Terdapat dua jenis ongkos yang sangat menentukan besarnya ongkos persediaan, dimana kedua ongkos tersebut memiliki perilaku yang berlawanan. Ongkos dimaksud adalah ongkos simpan (*carrying cost*) dan ongkos pesan (*order/set-up cost*). Manajemen persediaan yang baik berdampak terhadap terjaminnya ongkos operasi dan sistem operasional yang efisien.

4. Menjaga konsistensi mutu

Mutu adalah suatu fenomena yang selalu menjadi dambaan setiap pelanggan, karena dengan produk yang bermutu pelanggan menjadi puas, selanjutnya akan terjadi *repeat order*, maka loyalitas pelanggan akan terjaga akibat barang yang diberikan perusahaan bermutu baik. Melalui pengelolaan persediaan yang baik, akan diperhitungkan tentang jumlah persediaan yang harus disimpan, dan diidentifikasi, mana barang yang tergolong *fast moving* dan mana yang *slow moving*, kedua karakteristik tersebut memerlukan perlakuan yang berbeda, sehingga mutu produk yang tersimpan tetap terjaga dan pelanggan tidak akan dirugikan.

5. Prioritas penanganan persediaan

Dalam sebuah perusahaan baik manufaktur ataupun jasa, biasanya persediaan memiliki variasi yang sangat tinggi, baik variasi berdasarkan jenis, sifat, fungsi, jumlah, harga, dan saat perolehannya. Atas dasar variasi tersebut mengakibatkan bedanya cara menangani dan menilai persediaan tersebut. Sehubungan variasi persediaan sangat tinggi dipandang dari volume dan

harga, maka untuk menyederhanakan pengelolaannya diperlukan metode agar pihak manajemen bisa mengatur jumlah persediaan yang bervolume kecil, tapi memiliki nilai atau harga yang tinggi, dengan istilah lain harus adanya prioritas penanganan persediaan.

2.2.4 Sistem Pengendalian Persediaan

Sistem persediaan menjabarkan struktur organisasi dan kebijakan operasi untuk menyimpan dan mengendalikan barang-barang yang akan distok. Sistem tersebut bertanggung jawab dalam pemesanan dan penerimaan barang, antara lain untuk menentukan waktu dilakukannya pemesanan dan selalu menelusuri barang-barang yang telah dipesan, berapa banyaknya, dan dari siapa barang tersebut dipesan. Bagian ini membagi sistem menjadi sistem periode tunggal dan sistem periode berganda. Klasifikasi tersebut berdasarkan apakah keputusan tersebut hanyalah pembelian satu kali di mana pembelian didesain untuk menutup periode waktu tetap dan barang tersebut tidak akan dipesan kembali, atau keputusan melibatkan suatu barang yang akan dibeli secara periodik ketika persediaan perlu disimpan dalam stok untuk digunakan berdasarkan permintaan. Secara umum, model persediaan dibagi menjadi dua, yaitu (Robert Jacobs & Cahse, 2016):

1. Model persediaan tunggal
2. Model persediaan ganda (Q-Model dan P-Model)

2.2.5 Peramalan (*Forecasting*)

1. Pengertian Peramalan

Peramalan adalah perhitungan yang objektif dan dengan menggunakan data-data masa lalu, untuk menentukan sesuatu di masa yang akan datang (Sumayang, 2003). Peramalan merupakan bagian awal dari suatu proses pengambilan suatu keputusan. Sebelum melakukan peramalan harus diketahui terlebih dahulu apa sebenarnya persoalan dalam pengambilan keputusan itu.

Ber macam-macam metode telah ditetapkan dengan tujuan mendapatkan hasil ramalan yang tepat-guna, di mana metode peramalan tersebut kemudian akan menjadi bagian dari fungsi perencanaan dan merupakan sarana pengambilan keputusan manajemen operasi.

Situasi peramalan sangat bervariasi dalam horizon waktu, factor yang menentukan hail aktual, jenis pola data dan banyak aspek lainnya (Hyndman

& Athanasopoulos, 2018). Pilihan metode peramalan harus didasarkan pada pemahaman bagaimana hasil ramalan akan digunakan sebagai sarana pengambilan keputusan. Jenis informasi yang dibutuhkan untuk perencanaan *inventory* jelas berbeda dengan informasi yang digunakan untuk perencanaan kapasitas. Perencanaan diperlukan pada semua tingkatan operasi sehingga diperlukan beberapa macam metode peramalan yang sesuai dengan kebutuhan masing-masing jenjang di organisasi.

2. Karakteristik Peramalan

Menurut (Baroto, 2002) peramalan permintaan memiliki karakteristik tertentu yang berlaku secara umum. Karakteristik ini harus diperhatikan untuk menilai hasil suatu proses peramalan permintaan dan metode peramalan yang digunakan. Karakteristik peramalan permintaan adalah sebagai berikut:

1. Faktor penyebab yang berlaku di masa lalu diasumsikan akan berfungsi juga di masa yang akan datang.
2. Peramalan tidak pernah sempurna, permintaan actual selalu berbeda dengan permintaan yang diramalkan.
3. Tingkat ketepatan ramalan akan berkurang dalam rentang waktu yang semakin panjang. Implikasinya, peramalan untuk rentang yang pendek akan lebih akurat ketimbang peramalan untuk rentang waktu yang panjang.

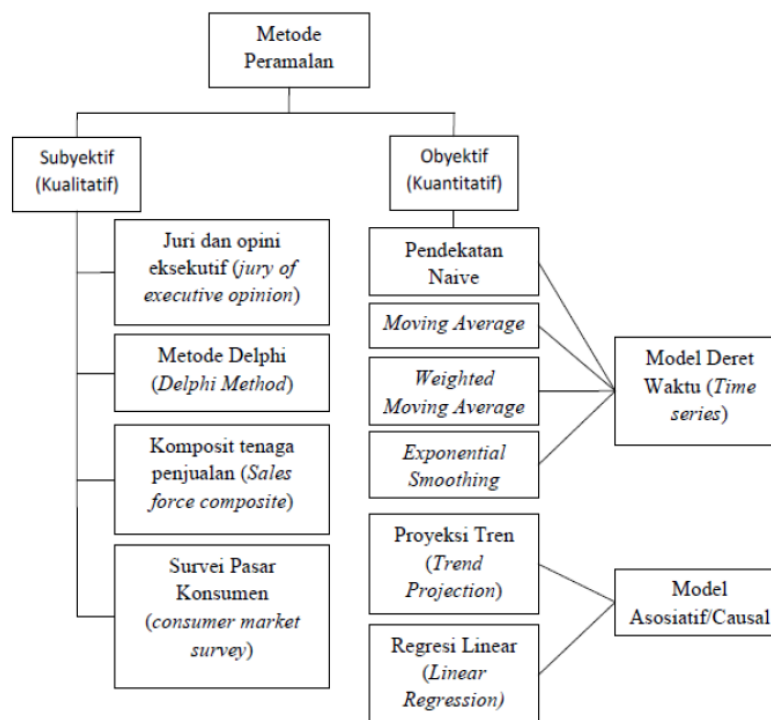

3. Jenis Pola Peramalan

Terdapat beberapa jenis pola data, diantaranya:

1. *Trend* (T), terjadi bila ada kenaikan atau penurunan dari data secara gradual dari gerakan datanya dalam kurun waktu panjang.
2. *Seasonality* (S), pola musiman terjadi bila pola datanya berulang sesudah suatu periode tertentu: hari, mingguan, bulanan, triwulan dan tahun.
3. *Cycles* (C), Siklus adalah suatu pola data yang terjadinya setiap beberapa tahun, biasanya dipengaruhi oleh fluktuasi ekonomi jangka panjang berkaitan dengan siklus bisnis.
4. *Horizontal* (H) atau Stasioner, terjadi bila nilai data berfluktuasi di sekitar nilai rata-rata yang tetap, stabil atau disebut stasioner terhadap nilai rata-ratanya.

4. Metode-Metode Peramalan

Tantangan dalam melakukan peramalan adalah memilih model peramalan yang terbaik yang harus mampu mengidentifikasi dan menanggapi pola aktifitas historis dari data sebaik mungkin. Pada dasarnya, semua metode peramalan memiliki ide sama, yaitu menggunakan data masa lalu untuk memperkirakan atau memproyeksikan data di masa yang akan datang. Berdasarkan tekniknya, metode peramalan dapat dikategorikan ke dalam metode kualitatif dan kuantitatif. Berikut metode peramalan menurut Heizer & Render (2014):

Gambar 2.1 Metode Peramalan

5. Peramalan Dengan Metode Time Series

Menurut Ginting (2007) metode time series adalah metode yang dipergunakan untuk menganalisis serangkaian data yang merupakan fungsi dari waktu. Metode ini mengasumsikan beberapa pola atau kombinasi pola selalu berulang sepanjang waktu, dan pola dasarnya dapat diidentifikasi atas dasar data historis dari serial itu.

Metode time series berhubungan dengan nilai-nilai suatu variabel yang diatur secara periodik sepanjang waktu dimana perkiraan permintaan diproyeksikan, misalnya mingguan, bulanan, kuartalan dan tahunan. Menurut

Sofyan (2013) metode *time series* dibagi menjadi lima metode yaitu metode *smoothing (moving average & exponential smoothing)*, metode proyeksi kecenderungan dengan regresi, metode musiman (*seasonal*), metode *trend* dan metode dekomposisi. Peramalan untuk horizon waktu yang pendek atau sangat pendek dapat menggunakan metode:

1. Metode *simple moving average*

Model dari *simple moving average* dapat dilihat pada persamaan berikut:

$$\overline{M}_t = Y_{t+1} = \frac{Y_t + Y_{t-1} + Y_{t-2} + \dots + Y_{t-n+1}}{n} \quad (2.1)$$

Keterangan:

\overline{M}_t = Rata – rata bergerak pada periode t

Y_t = Jumlah data dalam rata – rata bergerak

Y_{t+1} = Nilai ramalan periode berikutnya

2. Metode *weighted moving average*

Model dari *weighted moving average* dapat dilihat pada persamaan:

$$Y'_t = W_1 A_{t-1} + W_2 A_{t-2} + \dots + W_n A_{t-n} \quad (2.2)$$

Keterangan:

A = Permintaan aktual pada periode t

W_1 = Bobot yang diberikan pada periode t-1 dsb

n = Jumlah periode

3. Metode *single exponential smoothing*

Model dari *single exponential smoothing* dapat dilihat pada persamaan:

$$Y'_{t+1} = \alpha \cdot T_t + (1 - \alpha) \cdot Y'_t \quad (2.3)$$

Keterangan:

T_t = Data permintaan pada periode t

α = Faktor/ konstanta pemulusan

Y'_{t+1} = Peramalan untuk periode t

Ketepatan hasil peramalan adalah hal yang penting dalam sistem peramalan, yaitu bagaimana mengukur kesesuaian antara data yang sudah ada dengan data peramalan. Besarnya kesalahan peramalan dapat dihitung dengan menggunakan beberapa metode perhitungan yaitu *Mean Absolute Deviation*

(MAD), *Mean Square Error* (MSE) dan *Mean Absolute Percentage Error* (MAPE) (Sofyan, 2013).

2.2.6 Perancangan Sistem Informasi

Menurut Gordon (1995), “Informasi adalah data yang telah diolah menjadi suatu bentuk yang penting bagi si pemakai dan mempunyai nilai yang nyata atau bermanfaat dalam proses pengambilan keputusan saat ini atau masa mendatang”. Dimana terdapat hubungan antara data dan informasi yaitu informasi merupakan output dari proses transformasi data yang merupakan inputnya. Informasi memberikan pengaruh pada peningkatan pengetahuan seseorang terhadap sesuatu hal. Bila informasi dapat disusun secara sistematis dan teratur serta selalu dapat diperbaharui, maka ia dapat digunakan sebagai sarana pemberi arah bagi keputusan baik sehingga mampu meningkatkan kualitas keputusan yang dibuat.

Sistem informasi menerima masukan data dan interupsi, mengolah data tersebut sesuai dengan instruksi dan mengeluarkan hasilnya. Model sistem dasar masukan pengolahan dan keluaran cocok dalam hal sistem informasi yang paling sederhana apabila semua masukan diterima pada waktu yang sama, tetapi hal semacam ini jarang terjadi. Fungsi pengolahan informasi sering memerlukan data yang dikumpulkan dan diolah sebelumnya. Oleh karena itu, model sistem informasi ditambahkan alat penyimpanan data sehingga kegiatan pengolahan mempunyai data, baik yang baru maupun yang telah disimpan sebelumnya. Jadi apabila ditambahkan alat penyimpanan data maka fungsi pengolahan informasi tidak hanya mencakup pengubahan data menjadi informasi, tapi juga penyimpanan data untuk digunakan kemudian. Yang dimaksud penyimpanan data disini adalah penyimpanan data dalam suatu media komputer sehingga data tersebut mudah ditemukan bila diperlukan pada suatu saat (Delvika, 2011). Tahapan untuk merubah data menjadi informasi menurut Turner (1993) yaitu pengumpulan data, verifikasi, klarifikasi, pengurutan data, agregasi, perhitungan, penyimpanan data, pengeluaran data, reproduksi data dan diseminasi data/ informasi.

2.2.7 Proses Desain Sistem Informasi

Pengadaan sistem informasi pada setiap organisasi selalu berawal dari perumusan secara jelas tujuan yang ingin dicapai oleh sistem informasi yang dimaksud. Secara garis

besar metodologi disain sistem informasi adalah seperti terlihat pada Tabel 2.1 dibawah ini (Laudon & Laudon, 1998):

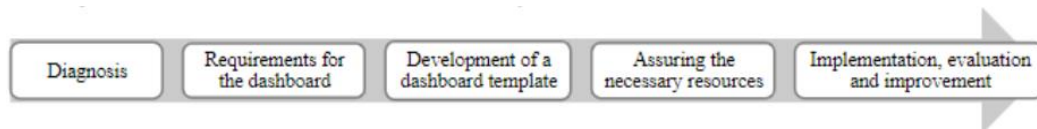

Tabel 2.1 Metodologi desain sistem informasi

Kegiatan	Uraian Kegiatan
Studi kelayakan	Perumusan tujuan pengembangan sistem informasi Survei awal terhadap permasalahan sistem informasi yang ada Membuat analisis dan keputusan akhir tentang kelayakan sistem baru
Analisis sistem	Mendefinisikan struktur keputusan pada organisasi pengguna Menentukan ruang lingkup sistem yang akan didesain Mengumpulkan fakta-fakta yang dibutuhkan untuk desain Analisis fakta
Desain umum sistem	Menentukan tujuan umum dan tujuan spesifik sistem informasi Membuat model konseptual Merumuskan operasi dasar pemrosesan data
Evaluasi dan Justifikasi Sistem	Pembuatan usulan sistem alternatif Memilih alternatif desain secara umum
Desain detail sistem	Membuat prosedur pengendalian dan operasional Membuat logika pemrosesan Merancang file dan pertimbangan basis data Menetapkan spesifikasi input-pouput
Implementasi sistem	Melakukan kebutuhan Pendidikan dan Latihan Membuat detail program dan melakukan pengujian Validasi sistem
Operasional sistem dan pemeliharaan	Melakukan audit implementasi lanjut sistem Mengatur pembaharuan sistem analisis umpan balik Menemukan kebutuhan untuk seluruh sistem Melakukan proses desain ulang

2.2.8 Dashboard

Dashboard atau dasbor merupakan alat yang digunakan untuk mengevaluasi proses yang sedang berjalan, memonitor kinerja yang sedang berjalan, serta untuk memprediksi kondisi di masa mendatang. Dashboard adalah alat visualisasi yang memberikan pemahaman bagi pengguna dengan bentuk diagram atau angka yang jelas serta perencanaan dan perbandingan aktual. Sering divisualisasikan dalam antarmuka pengguna yang disederhanakan (Iqbal et al., 2019). Dashboard harus memiliki sasaran yang ditetapkan oleh pengguna dan secara konsisten memenuhi harapan mereka. User experience adalah salah satu fitur utama dari perangkat lunak dashboard dan end user adalah pihak yang menggunakan informasi dan membuat keputusan serta mendorong

strategi manajemen perubahan berdasarkan informasi yang disajikan. Adapun tahap dalam merancang desain *dashboard* yaitu sebagai berikut (Vilarinho et al., 2017):

Gambar 2.2 Desain Dashboard

2.2.9 Metode Agile

Terdapat beberapa macam klasifikasi metodologi pengembangan perangkat lunak, diantaranya adalah linear sequential model, parallel model, iterative model, prototyping model, throwaway prototyping model, rapid application development model, spiral model, v-shaped model dan agile development (Budi et al., 2017). Dalam penelitian ini agile development digunakan karena lebih tanggap dalam pengembangan sistem kedepannya yang menekankan pada kepuasan pelanggan dan kecepatan implementasi.

Konsep Agile Software Development dicetuskan oleh Kent Beck dan 16 rekannya dengan menyatakan bahwa agile software development adalah cara membangun software dengan melakukannya dan membantu orang lain membangunnya sekaligus. Agile software development methods atau agile methodology merupakan sekumpulan metodologi pengembangan perangkat lunak yang berbasis pada pengembangan iteratif, di mana persyaratan dan solusi berkembang melalui kolaborasi antar tim yang terorganisir (Pressman, 2012). Rangkaian kegiatan pengembangan dalam metode agile sebagai berikut (Mahendra & Eby Yanto, 2018):

1. Analisa kebutuhan sistem

Pada tahap ini dilakukan asesmen terhadap pengguna untuk menggali secara detail software requirement yang dibutuhkan oleh pengguna.

2. Desain

Pada tahap desain dilakukan perancangan sistem, mulai dari desain arsitektur sistem, desain proses bisnis, desain database, hingga desain user interface. Alat bantu yang digunakan dalam tahap desain ini adalah Unified Modeling Language (UML) dan Entity Relationship Diagram (ERD)/ Logical Relational Structure (LRS) untuk desain database.

3. Code generation

Pada tahap ini dilakukan penulisan kode program dengan menggunakan bahasa PHP, sedangkan software untuk manajemen database menggunakan MySQL.

4. Testing

Kegiatan testing dilakukan untuk meminimalisir kesalahan (error) dan untuk memastikan keluaran yang dihasilkan telah sesuai dengan user requirement dengan menggunakan metode black box testing.

5. Support

Kegiatan support dilakukan untuk menindaklanjuti perubahan yang dimintakan pengguna setelah keluaran telah diserahkan kepada pengguna. Perubahan bisa terjadi karena adanya kesalahan yang muncul dan tidak terdeteksi saat pengujian atau adaptasi dengan kebutuhan/lingkungan baru.

2.2.9.1 Hypertext Preprocessor (PHP)

PHP (PHP: Hypertext Preprocessor) adalah bahasa pemrograman yang berbentuk scripting, sistem kerja dari program ini adalah sebagai interpreter dan bukan sebagai compiler. Dalam bahasa pemrograman, bahasa kompilasi adalah bahasa yang mengubah skrip program menjadi kode sumber, kemudian mengubah dari bentuk kode sumber ke bentuk kode objek, bentuk objek kode membuat file yang lebih kecil dari file datar di atas (Hidayatullah & Kawistara, 2017).

2.2.9.2 Unified Modeling Language (UML)

Unified Modeling Language adalah sebuah bahasa untuk menentukan visualisasi, konstruksi dan mendokumentasikan artifact dari sistem software untuk memodelkan bisnis dan sistem non software lainnya. UML merupakan suatu kumpulan teknik terbaik yang telah terbukti sukses dalam memodelkan sistem yang besar dan kompleks. Untuk membuat suatu model, UML memiliki diagram grafis sebagai berikut:

1. *Use case diagram*

Diagram ini menjelaskan manfaat sistem jika dilihat menurut pandangan orang yang berada diluar sistem (*actor*). Diagram ini menunjukkan fungsionalitas suatu sitem atau kelas dan bagaimana sistem berinteraksi dengan dunia luar. *Use case diagram* dapat digunakan selama proses analisis untuk menangkap persyaratan sistem dan untuk memahami bagaimana sistem seharusnya bekerja. Selain tahapan disain, use case diagram menetapkan perilaku sistem saat diimplementasikan. Dalam sebuah model terdapat satu atau beberapa *use case diagram*.

2. *Activity diagram*

Diagram ini memodelkan alur kerja (*work flow*) sebuah proses bisnis dan urutan aktivitas dalam suatu proses. Diagram ini sangat mirip dengan sebuah *flowchart* karena tidak dapat dimodelkan sebuah alur kerja dari satu aktivitas ke aktivitas lainnya kedalam keadaan sesaat (*state*). Seringkali bermanfaat bila membuat sebuah *activity diagram* terlebih dahulu dalam memodelkan sebuah proses untuk membantu memahami proses secara keseluruhan. *Activity diagram* juga sangat berguna ketika kita ingin menggambarkan perilaku paralel atau menjelaskan bagaimana perilaku dalam berbagai *use case* berinteraksi.

2.2.10 *User Acceptance Test (UAT)*

User Acceptance Test (UAT) adalah suatu proses pengujian yang dilakukan oleh pengguna yang dimaksudkan untuk menghasilkan dokumen yang dijadikan bukti bahwa sistem yang dikembangkan dapat diterima atau tidaknya oleh pengguna. Apabila hasil pengujian sudah bisa dianggap memenuhi kebutuhan dari pengguna maka aplikasi dapat diterapkan. Pengujian dengan UAT dilakukan dengan mengajukan beberapa pertanyaan terhadap pengguna yaitu partman yang bertindak sebagai admin dan dan kepala bengkel yang bertindak pemegang akhir keputusan. Pengujian dilakukan dengan pengisian kuesioner oleh *user*. Pertanyaan kuesioner berisikan pengujian kebergunaan (*usability testing*) berdasarkan lima komponen yaitu kemampuan untuk dipahami (*learnability*), efisien (*efficiency*), mudah diingat (*memorability*), aman untuk digunakan atau mengurangi tingkat kesalahan (*errors*) dan memiliki tingkat kepuasan (*satisfaction*) (Nielsen, 2012).

Pembobotan pada setiap kategori jawaban terbagi lima dimulai dari yang paling rendah sangat tidak setuju, kurang setuju, netral, setuju dan sangat setuju. Hasil dari keseluruhan total bobot akan dibagi dengan total bobot tertinggi (Y) , yang dituang dalam persamaan:

$$\% \text{ Index} = \frac{\text{Total Skor}}{Y} \times 100\% \quad (2.4)$$

BAB 3

METODE PENELITIAN

3.1 Objek Penelitian

Objek yang akan diteliti dalam penelitian ini adalah manajemen persediaan *spare parts* pada bengkel AHASS motor dengan uji coba pada AHASS Bintang Mulia Jaya Motor Palembang.

3.2 Subjek Penelitian

Subjek yang diteliti dalam penelitian ini adalah *spare parts* mesin motor Honda di AHASS Bintang Mulia Jaya Motor. AHASS ini berada di Jl. Brigjen Alamsyah Ratu Prawira Negara 01 RT 006, Kota Palembang, Sumatera Selatan.

3.3 Metode Pengumpulan Data

3.3.1 Pengumpulan Data

Pengumpulan data dilakukan untuk memperoleh data-data yang diperlukan dalam mendukung kelancaran penyelesaian penelitian yang sedang dilakukan. Pengumpulan data dalam penelitian ini dilakukan dengan tiga acara, diantaranya yaitu:

1. Wawancara

Wawancara yaitu sebuah teknik pengumpulan data secara langsung dengan cara melakukan tanya jawab dan diskusi tentang masalah yang terkait dengan penelitian kepada pihak-pihak yang terakut. Objek wawancara dalam penelitian ini adalah *user / partman* yaitu orang yang bertanggung jawab untuk mengontrol persediaan *spare parts* dan pengadaan *spare parts* rutin tiap bulannya. Selain itu, kepala bengkel yang juga sebagai objek wawancara sebagai penanggungjawab keseluruhan bengkel. Serta seorang regulator yang berasal dari Astra Motor Sumsel sebagai pemegang otoritas.

2. Observasi

Observasi yaitu sebuah teknik pengumpulan data dengan cara melakukan pengamatan langsung di lapangan salah satunya untuk mengetahui bagaimana manajemen persediaan dan pengendalian persediaan spare part berjalan, *spare parts* apa saja yang tersedia, berapa kebutuhan spare part selanjutnya, bagaimana keadaan tempat penyimpanannya di gudang, dan lain sebagainya.

3. Studi Kepustakaan

Studi Kepustakaan yaitu penelitian yang dilakukan untuk memperoleh data dan informasi yang akan digunakan sebagai referensi sistematika penulisan laporan penelitian, landasan teori, dan kerangka berfikir ilmiah yang diambil dari literatur, buku serta dari laporan penelitian terdahulu.

3.3.2 Data yang Dibutuhkan

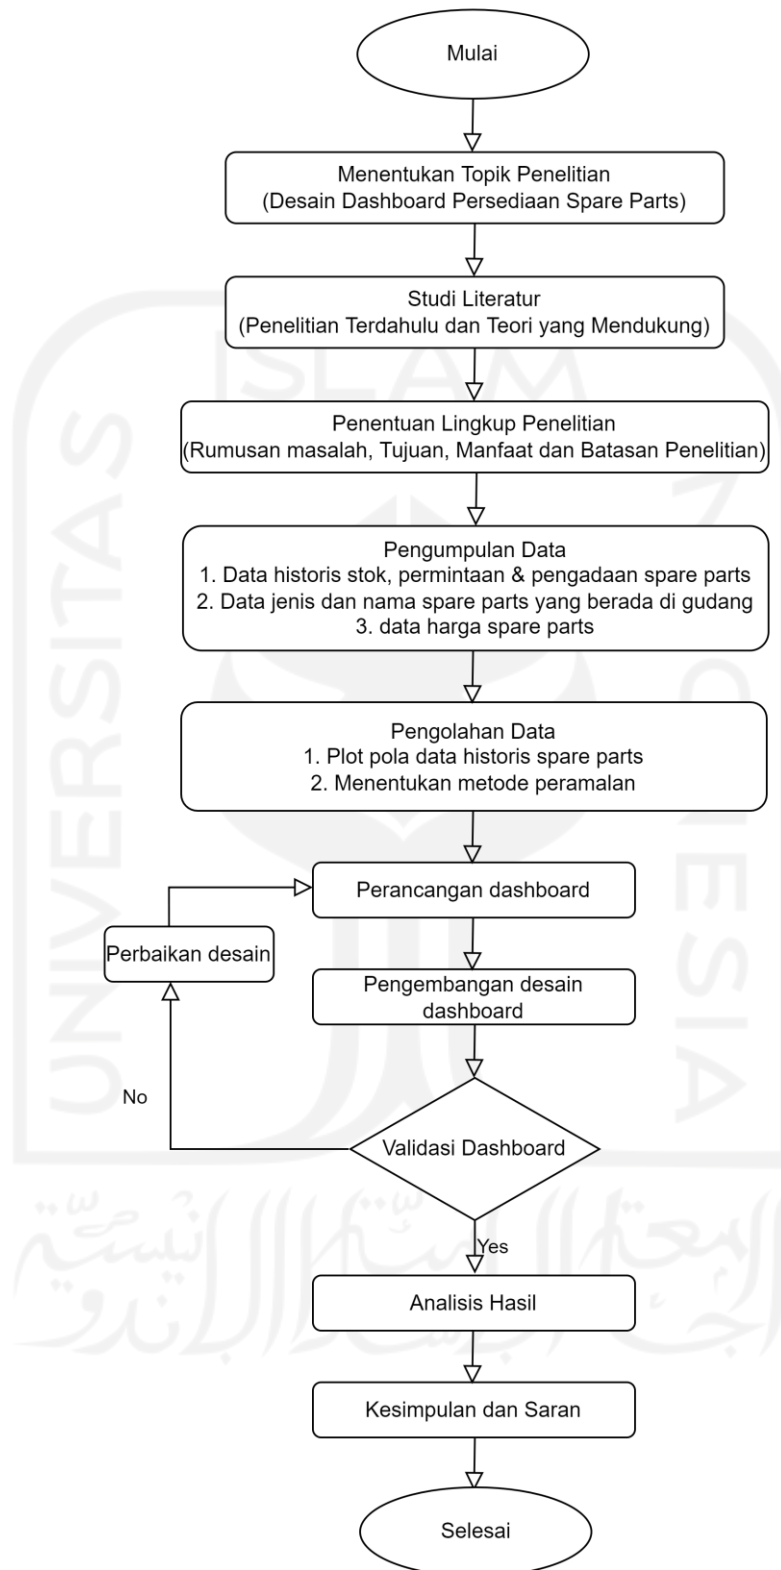

Demi kelancaran dan keberhasilan penelitian, diperlukan data yang akan digunakan dalam penelitian yaitu berupa data primer dan data sekunder.

Data Primer adalah jenis data yang didapatkan atau dikumpulkan secara langsung di lapangan oleh peneliti dari sumbernya tanpa perantara yaitu berupa transkrip hasil wawancara dan catatan hasil pengamatan langsung.

Data sekunder adalah jenis data yang didapatkan dari sumber lain diluar objek penelitian dan biasanya melalui perantara ataupun dokumentasi perusahaan. Data Sekunder yang dibutuhkan, yaitu:

1. Data Historis Stok, Permintaan dan Pengadaan 6 bulan terakhir
2. Data Jenis dan Nama *Spare part* yang berada di Gudang
3. Data Harga *Spare part*

3.4 Diagram Alir Penelitian

Gambar 3.1 Diagram Alir Penelitian

3.5 Pengolahan Data

1. Tahap pembuatan dashboard dengan metode agile:

1. Analisa kebutuhan sistem

Pada tahap ini dilakukan asesmen terhadap pengguna untuk menggali secara detail software requirement yang dibutuhkan oleh pengguna. Dalam penelitian ini, wawancara dilakukan kepada part man mengenai kebutuhan terkait manajemen persediaan spare parts yang dibutuhkan, kendala yang sedang dihadapi juga harapan berupa sistem yang dapat membantu pengelolaan stock spare parts.

2. Desain

Pada tahap desain dilakukan perancangan sistem, mulai dari desain arsitektur sistem, desain proses bisnis dan desain database. Alat bantu yang digunakan dalam tahap desain ini adalah Unified Modeling Language (UML) dan Class Diagram untuk desain database.

3. Code generation/ Development

Pada tahap ini bentuk sistem yang akan dikembangkan berupa website yang membantu dalam pengelolaan stock spare parts sesuai dengan kebutuhan part man. Dalam pengerjaan website penulisan kode menggunakan bahasa pemrograman PHP dan JavaScript dengan memanfaatkan framework Laravel dan untuk manajemen database yang digunakan adalah MySQL.

4. Testing

Kegiatan testing dilakukan untuk meminimalisir kesalahan (*error*) dan untuk memastikan keluaran yang dihasilkan telah sesuai dengan harapan pengguna dengan menggunakan metode *user acceptance test*.

BAB 4

ANALISIS DATA

4.1 Pengumpulan Data

4.1.1 Profil Perusahaan

Astra Honda Authorized Service Station (AHASS) yang menjadi tempat pelaksanaan penelitian ini yaitu Bintang Mulia Jaya (BMJ) Motor Palembang. AHASS BMJ melayani *showroom* penjualan (H1), layanan servis (H2) dan gerai suku cadang (H3). Sebagai bengkel resmi Honda di Indonesia, AHASS bergerak dibidang jasa bengkel motor yang keberadaannya sangat dibutuhkan oleh pengguna motor Honda untuk merawat dan memperbaiki kendaraannya. Salah satu yang menjadi daya tarik konsumen ialah lengkapnya produk *spare part* yang diinginkan oleh konsumen tersebut.

4.1.2 Data Persediaan Spare Parts

Data Persediaan spare parts AHASS BMJ Motor Palembang didapatkan dari keseluruhan stok yang ada di gudang. Terdapat 805 jenis *spare parts* dengan total jumlah spare parts sebanyak 8138 buah. Juga terdapat data harga satuan dan total keseluruhan *cash flow spare parts*. Data ini akan digunakan sebagai master data stok *spare parts* di dashboard. Data persediaan spare parts dapat dilihat di lampiran 2.

4.1.3 Data Historis Permintaan Spare Parts

Data historis permintaan spare parts didapatkan dari hasil pencatatan bulanan yang dilakukan oleh kasir/ part man melalui AHASS Sistem. Data historis yang digunakan adalah data Juni 2021 hingga Juni 2022 untuk kepentingan pemetaan pola data yang akan menentukan metode peramalan yang akan digunakan. Untuk pengolahan data hasil peramalan pada dashboard, data yang digunakan adalah data historis 6 bulan kebelakang. Data historis ini dapat dilihat pada lampiran 3.

4.2 Pengolahan Data

4.2.1 Analisa Kebutuhan Sistem

4.2.1.1 Kondisi Saat ini

Data permintaan spare parts tersimpan dalam database yang disediakan oleh Astra Honda Motor yaitu AHASS Sistem. Proses pembelian *spare parts* oleh *customer* tiap

harinya akan tercatat disana. Sedangkan proses pemesanan stok spare parts di AHASS hanya dapat dilakukan satu kali tiap bulannya di Astra Motor Sumsel, biasanya diawal bulan. AHASS akan menjaga reliabilitasnya dengan hanya menjual barang asli Honda sehingga pembelian spare parts selain di main dealer merupakan hal terlarang. Petugas yang berlaku sebagai kasir biasanya juga akan merangkap sebagai orang yang memesan spare parts (partman). Proses pemesanannya selama ini belum dianggap optimal karena dilakukan secara manual dengan mengandalkan daya ingat partman saja. Jumlah spare parts yang ratusan dan transaksi yang harus diingat satu bulan kebelakang membuat selama ini sering terjadi kelebihan atau kekurangan stok spare parts. Kesalahan pengadaan spare parts akan memengaruhi loyalitas customer. Maka, diperlukan alat untuk membantu partman dalam melakukan rutinitas perencanaan pengadaan *spare parts*.

4.2.1.2 Dashboard Requirements

Pada langkah awal identifikasi penyusunan dashboard maka dilakukan wawancara terhadap user yang dalam hal ini adalah partman dan kepala bengkel serta regulator yang mewakili main dealer. Tabel 4.1 merupakan tabel kebutuhan dashboard dari keinginan user dan regulator:

Tabel 4.1 Dashboard Requirements

Tujuan	Fungsi dan tampilan visual	Konten
Memberikan daftar kesimpulan spare parts yang harus dipesan.	Mempermudah pengambilan keputusan perencanaan pengadaan spare parts.	Informasi berisi tabel daftar spare parts serta jumlah unit yang harus dipesan.
Meningkatkan pengambilan keputusan dan pengoptimalan kondisi stok spare parts	Mengetahui kondisi stok spare parts secara real time.	Informasi berisi tabel/ grafik dengan tampilan warna berbeda sebagai penanda kondisi stok spare parts.
Mempermudah pekerjaan partman	Penggunaan grafik agar informasi yang disajikan cepat dan mudah dipahami, warna dan penulisan yang menarik.	Informasi terkait dengan kondisi/ klasifikasi stok spare parts

4.2.1.3 Penentuan Metode Peramalan

Terdapat 4 pola data yang bisa dijadikan landasan dalam menentukan metode peramalan yang tepat yaitu *trend*, *seasonal*, *cycles* dan *stationer*. Pada penelitian ini data historis yang digunakan untuk menentukan pola data adalah data 12 bulan terakhir

(Lampiran 2). Dari 805 total jenis *spare parts*, hanya 34% yang termasuk ke paling banyak dibeli, selebihnya terjual tidak lebih dari 1 tiap bulannya. Data jenis *spare parts* yang paling banyak dibeli menunjukkan berarti jenis tersebut paling banyak dibutuhkan sehingga dari data tersebut muncullah pola data yang mendominasi yaitu pola data stasioner.

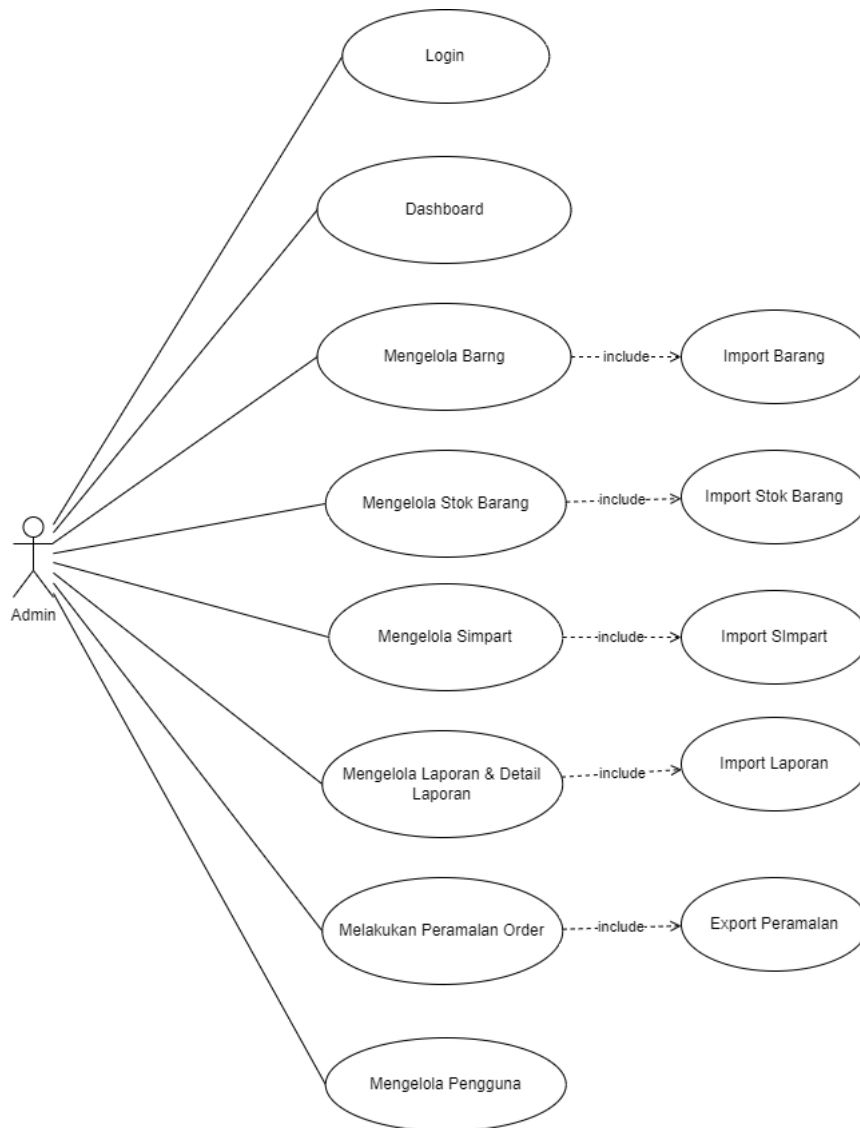

Selain pola data, waktu peramalan juga menentukan metode yang akan digunakan. Dalam penelitian ini, peramalan yang direncanakan adalah jangka pendek. Maka metode yang dapat dipakai adalah *time series*. Dengan pola data stasioner dan jangka waktu yang pendek, maka metode *time series single moving average*, *weighted moving average* dan *simple exponential smoothing* terpilih untuk digunakan (Wilson & Keating, 2002). Peramalan ini sendiri dilakukan dengan bantuan program QM for Windows dengan hasil perbandingan MAPE terkecil secara berurutan yaitu *single exponential smoothing* ($\alpha = 0,28$) sebesar 14,91%, *simple moving average* sebesar 19,22% dan *weighted moving average* sebesar 20%. Hasil peramalan akan dijumlahkan dengan *standard item minimum* sebelum akhirnya dijadikan saran untuk pembelian *spare parts* bulan selanjutnya.

4.2.2 Desain Dashboard

Bengkel resmi Honda (AHASS) yang digunakan pada perancangan *dashboard* adalah AHASS Bintang Mulia Jaya Motor Palembang. Rancangan *dashboard* digunakan sebagai alat bantu pengambil keputusan yang akan digunakan dalam perencanaan pemesanan *spare parts* rutin bulanan. Perancangan sistem yang digunakan mengacu pada pendekatan berorientasi objek sehingga digunakanlah UML.

4.2.2.1 Use Case Diagram

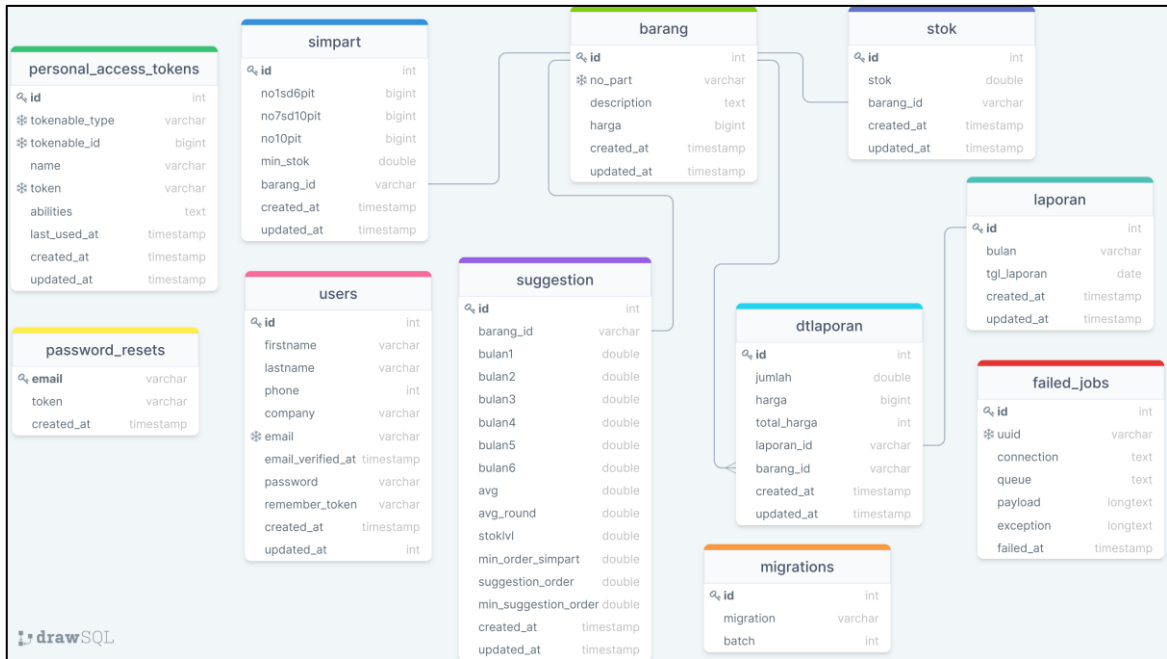

Use case diagram dari perancangan *dashboard* ini menjelaskan interaksi antara actor dengan sistem dan mengetahui fungsionalnya.

Gambar 4.1 Use Case Diagram

4.2.2.2 Class Diagram

Terdapat enam tabel yang saling berhubungan di *class diagram* pada gambar 4.2. Enam tabel tersebut adalah barang, simpart, stok, dtlaporan, laporan dan suggestion. Relasional yang kemungkinan terjadi yaitu hubungan satu ke satu atau sat uke banyak. Relasional ditandai dengan melihat anak panah. Jika anak panah satu, maka itu satu, jika anak panah dua berarti banyak. Sehingga hubungan dapat dilihat dari ujung anak panah di kedua ujungnya. Bentuk relasional dihubungkan oleh dua kunci pada masing-masing tabel.

Gambar 4.2 Class Diagram

Berikut ini akan dijelaskan tabel tabel yang digunakan dalam perancangan.

1. Tabel Barang

Nama Tabel : Barang

Primary Key : Id

Keterangan : Penyimpanan Barang

Tabel 4.2 Tabel Barang

Field	Type	Size	Keterangan
Id	Bigint	20	Id Barang (PK)
No_part	Varchar	255	Nomor Part Barang
Description	Text	-	Dekripsi Barang
harga	Bigint	20	Harga Barang
Created_at	Timestamp	-	Tanggal Buat
Updated_at	Timestamp	-	Tanggal Update

2. Tabel Simpart

Nama Tabel : Simpart

Primary Key : Id

Keterangan : Penyimpanan Simpart

Tabel 4.3 Tabel Simpart

Field	Type	Size	Keterangan
Id	Bigint	20	Id Simpart (PK)
No1sd6pit	Bigint	20	Nomor Simpart 1 - 6
No7sd10pit	Bigint	20	Nomor Simpart 7 – 10
No10pit	BigInt	20	Nomor Simpart 10
Min_Stok	Double	-	Minimum Stok
Barang_id	Varchar	255	Id Barang (FK)
Created_at	Timestamp	-	Tanggal Buat
Updated_at	Timestamp	-	Tanggal Update

3. Tabel Stok

Nama Tabel : stok

Primary Key : Id

Keterangan : Penyimpanan stok barang

Tabel 4.4 Tabel Stok

Field	Type	Size	Keterangan
Id	Bigint	20	Id Simpart (PK)
Stok	Double	-	Stok Barang
Barang_id	varchar	255	Id Barang (FK)
Created_at	Timestamp	-	Tanggal Buat
Updated_at	Timestamp	-	Tanggal Update

4. Tabel Dtlaporan

Nama Tabel : dtlaporan

Primary Key : id

Keterangan : Penyimpanan detail laporan

Tabel 4.5 Tabel Dtlaporan

Field	Type	Size	Keterangan
Id	Bigint	20	Id dtLaporan (PK)
Jumlah	Double	-	Jumlah Barang
Harga	Bigint	20	Harga Barang
Total_Harga	Int	255	Total Harga Barang
Laporan_id	Varchar	255	Id Laporan (FK)
Barang_id	Varchar	255	Id Barang (FK)
Created_at	Timestamp	-	Tanggal Buat
Updated_at	Timestamp	-	Tanggal Update

5. Tabel Laporan

Nama Tabel : laporan

Primary Key : Id

Keterangan : Penyimpanan laporan

Tabel 4.6 Tabel Laporan

Field	Type	Size	Keterangan

Created_at	Timestamp	-	Tanggal Buat
Updated_at	Timestamp	-	Tanggal Update

4.2.2.3 Diagram Alir Proses

Perhitungan penentuan persediaan *spare part* dilakukan menggunakan data penjualan perbulan selama enam bulan terakhir, kemudian ditentukanlah bobot dari data penjualan tersebut. Jika hendak meramalkan kebutuhan bulan Juli maka data historis yang

dibutuhkan adalah data bulan Januari hingga Juni. Diagram alir sistem yang akan diusulkan secara umum disajikan pada gambar 4.3.

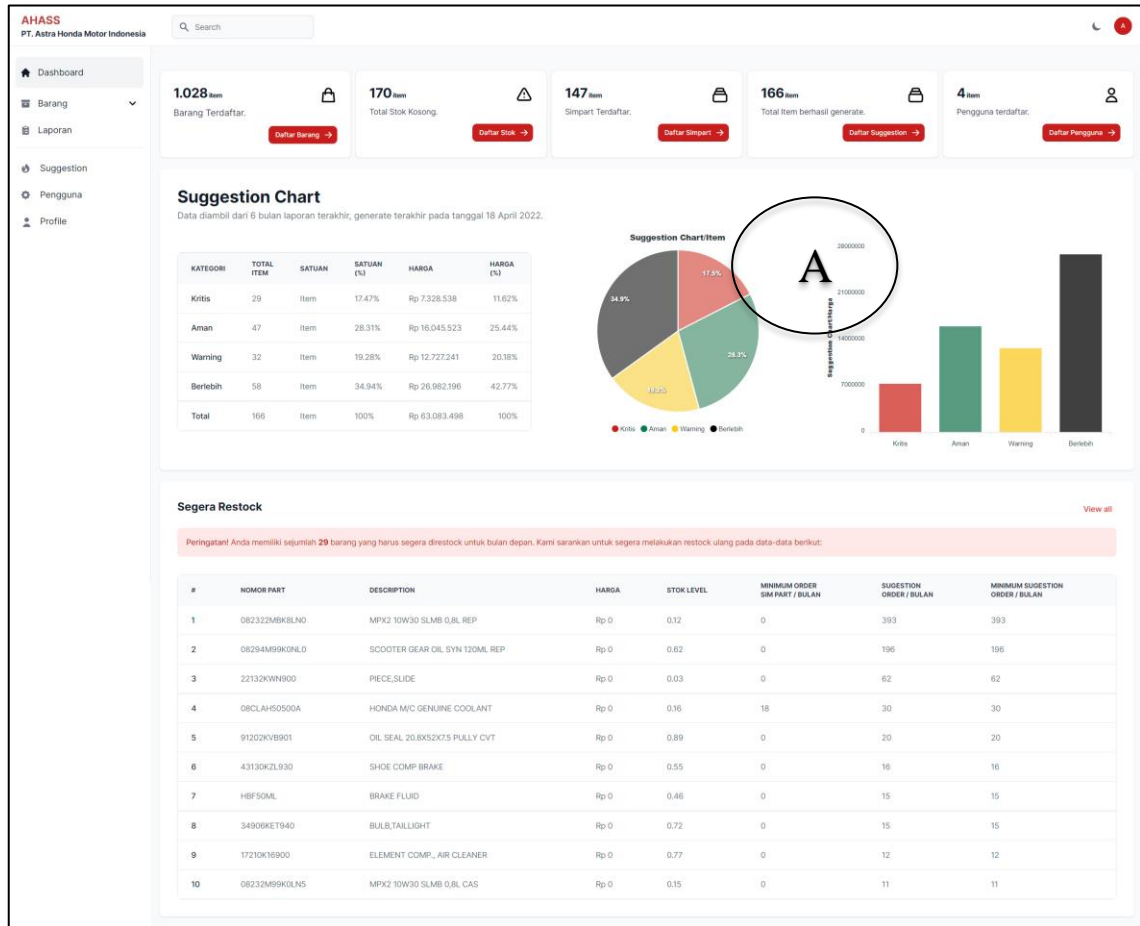

Gambar 4.3 Diagram alir sistem informasi usulan

4.2.3 Pengembangan Desain *Dashboard*

Terdapat empat menu utama pada sistem manajemen persediaan spare parts sepeda motor Honda ini yaitu dashboard, barang, laporan dan suggestion. Penyajian data

pada dashboard dibuat dalam bentuk tabel, grafik pie dan grafik batang agar terlihat lebih menarik dan mudah dipahami. Tampilan informasi ke-empat menu tersebut dapat dilihat pada gambar 4.4 sampai 4.7.

Gambar 4.4 Tampilan Halaman Dashboard

Penentuan tampilan pada *dashboard* diawali dengan menyesuaikan dengan keinginan *user*. *Dashboard* yang dibangun akan digunakan untuk mempermudah kerja *user* dalam rutinitas perencanaan pengadaan *spare parts*. Pada gambar 4.4 halaman *dashboard* berisikan tabel *top list spare part* yang harus segera di *restock* dan juga grafik yang menunjukkan kondisi stok *spare parts* yang ada di gudang saat ini (huruf A). Hal ini sesuai dengan permintaan *user* yang menginginkan adanya peningkatan pengambilan keputusan dan pengoptimalan kondisi stok *spare parts* yang tertuang pada tabel 4.1 *dashboard requirements*.

Gambar 4.7 Tampilan Halaman Suggestion

Halaman *suggestion* (huruf B) merupakan tujuan utama yang diinginkan oleh user karena diharapkan dapat mempermudah pengambilan keputusan perencanaan pengadaan *spare parts*. Halaman ini adalah hasil akhir dari peramalan yang sudah disesuaikan dengan *minimum order parts*. Terdapat kolom *minimum suggestion order / bulan* yang dijadikan landasan untuk pemesanan *spare parts* bulan berikutnya. Juga terdapat perbedaan warna merah, kuning, hijau dan hitam yang mempermudah pengelompokan *spare parts* yang harus dibeli, disarankan dibeli, masih cukup dan stok berlebih. Hal ini dapat dikembangkan lagi agar dapat menjadi kebijakan dalam pengelolaan *spare part* kedepannya. Bagi user yang akan memakai data *suggestion* ini maka dapat menarik data dengan memilih menu *export excel* (huruf C), maka data akan tampil dalam bentuk excel. Hal ini diharapkan dapat mempermudah pekerjaan user dan hasil *suggestion* dapat mengurangi kesalahan dalam pemesanan *spare parts*.

4.2.4 Testing

Untuk melihat tanggapan *user* terhadap sistem yang dikembangkan, maka dilakukan *User Acceptance Test* (UAT) berupa survei terhadap 3 orang responden yaitu partman / kasir, kepala bengkel dan regulator dengan memberikan 8 pertanyaan dengan jawaban terdiri dari tingkat yang terdapat pada tabel 4.8.

Tabel 4.8 Pilihan jawaban UAT

Kode	Jawaban
A	Sangat Setuju
B	Setuju
C	Netral
D	Kurang Setuju
E	Sangat Tidak Setuju

Tabel 4.9 Pertanyaan Kuesioner

No	Pertanyaan	Ax5	Bx4	Cx3	Dx2	Ex1	Jumlah	(%)
1	Apakah tampilan menu pada aplikasi ini sesuai dengan yang dibutuhkan?	2	1	0	0	0	14	93
2	Apakah aplikasi menampilkan daftar kesimpulan <i>spare parts</i> yang harus dipesan?	3	0	0	0	0	15	100
3	Apakah aplikasi tersebut menyediakan fitur yang dibutuhkan?	2	1	0	0	0	14	93
4	Apakah aplikasi ini mempermudah dalam pemesanan <i>spare part</i> ?	3	0	0	0	0	15	100
5	Apakah aplikasi ini dapat mempermudah pekerjaan <i>partman</i> ?	3	0	0	0	0	15	100
6	Apakah aplikasi ini dapat digunakan oleh kepala bengkel dan regulator?	3	0	0	0	0	15	100
7	Apakah aplikasi menampilkan kondisi stok <i>spare parts</i> ?	3	0	0	0	0	15	100
8	Apakah aplikasi ini bersifat <i>user friendly</i> (mudah digunakan)?	3	0	0	0	0	15	100

Menggunakan persamaan 2.4 maka % rata-rata hasil UAT adalah sebagai berikut:

$$Index = \frac{Total\ Skor}{y} \times 100\%$$

$$Index = \frac{787}{800} \times 100\%$$

$$Index = 98\%$$

BAB 5

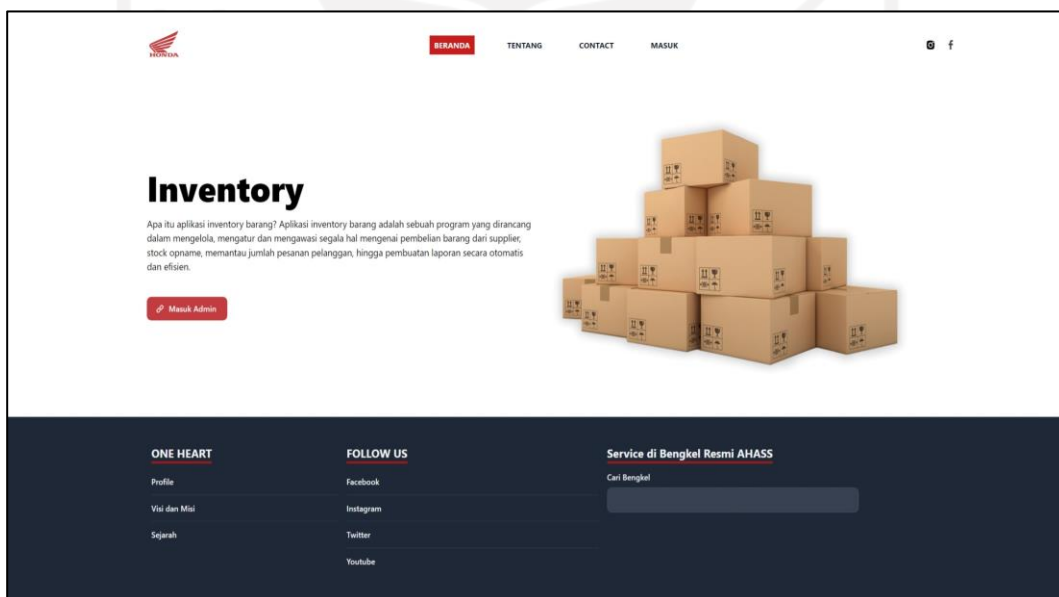

PEMBAHASAN

5.1 Tampilan Dashboard Manajemen Persediaan Spare Parts

Bentuk sistem yang dikembangkan yaitu berupa program yang membantu dalam pengelolaan stok *spare parts* sesuai dengan kebutuhan *part man*. Dalam pengerjaan *dashboard* penulisan kode menggunakan bahasa pemrograman PHP dan JavaScript dengan memanfaatkan framework Laravel dan untuk manajemen database yang digunakan adalah MySQL.

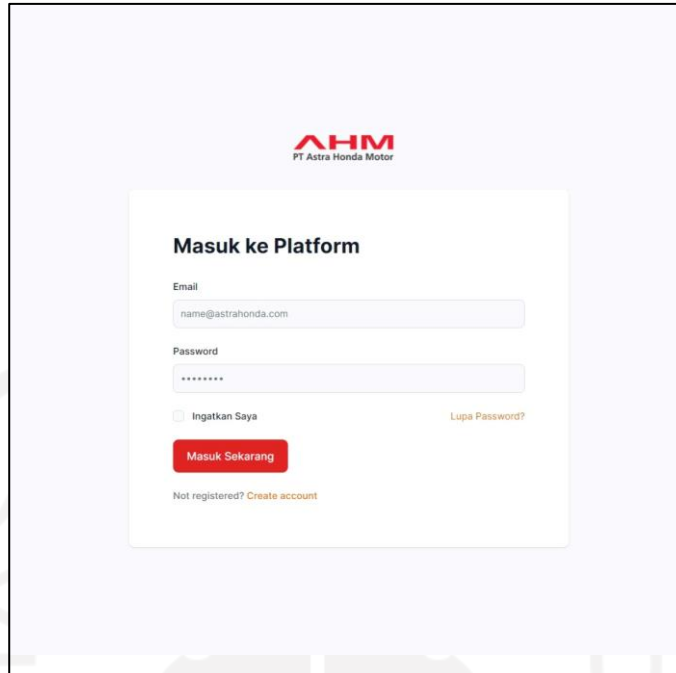

1. Tampilan Awal dan Halaman Login

Dashboard hanya dapat diakses oleh admin dan kepala bengkel dengan *email* dan *password* yang telah dibuat. Pada tampilan awal akan terdapat pilihan “masuk admin” sebelum masuk ke halaman login. Tampilan awal program dapat dilihat pada gambar 5.1.

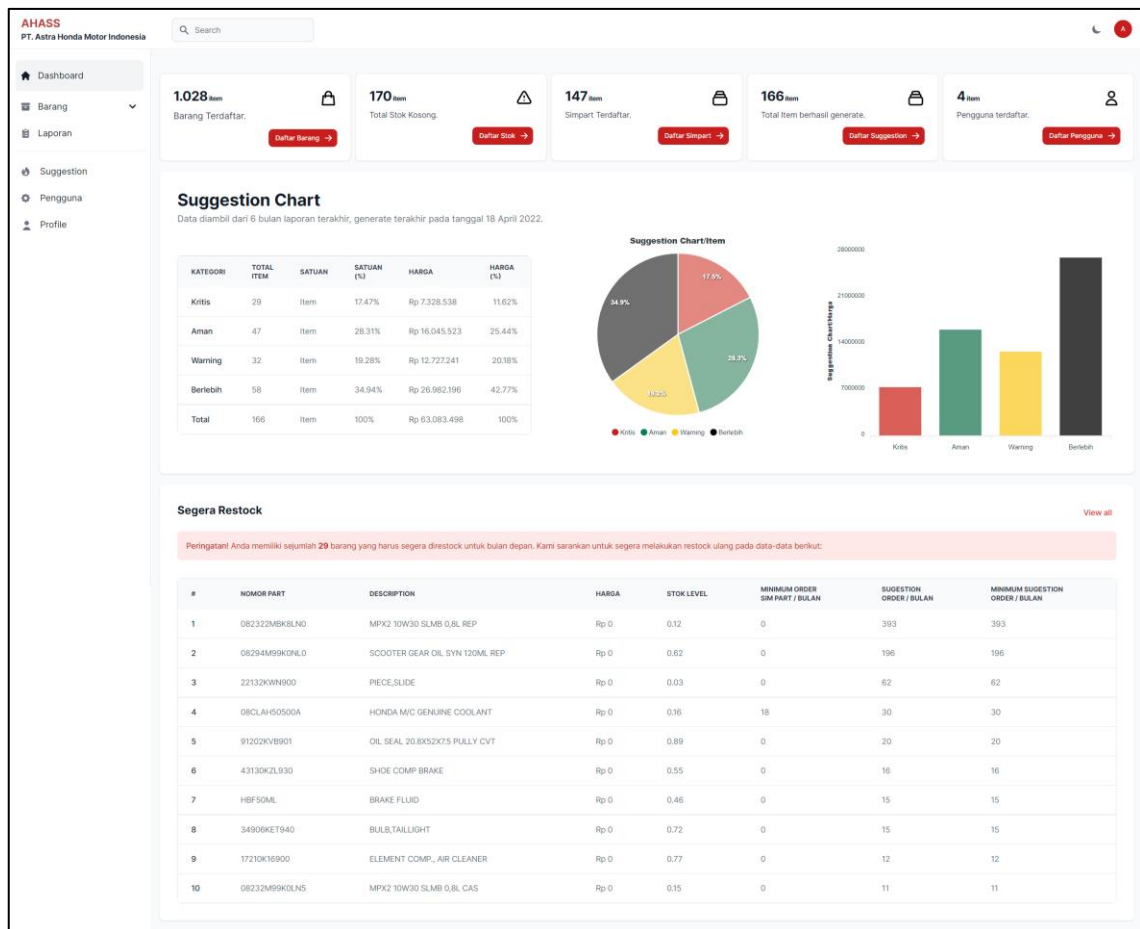

Gambar 5.1 Halaman Awal

Pada pembuatan program ini terdapat dua akses dari dua pengguna yaitu admin/ *part man* dan kepala bengkel dengan *email* dan *password* yang berbeda. Mereka dapat menekan pilihan “masuk admin” yang akan masuk ke halaman login seperti gambar 5.2.

Gambar 5.2 Halaman Login

Ketika pengguna sudah melakukan *login* maka akan muncul tampilan awal program. Pada tampilan awal ini, akan menyajikan beberapa menu pilihan tergantung dengan penggunanya. Pada halaman ini juga menyajikan pilihan tabel, grafik pie ataupun grafik batang yang merupakan hasil pengolahan data sekaligus *output* dari *dashboard* yang telah dirancang. Adapun tampilan halaman utama dapat dilihat pada gambar 5.3.

Gambar 5.3 Halaman Utama

2. Halaman Menu Barang

Tampilan menu barang akan berisi sub menu yaitu daftar barang, stok dan simpart. Daftar barang akan menampilkan semua barang yang telah didaftarkan. Admin dapat menghapus dan menambahkan jenis barang jika diperlukan dengan melakukan proses Tambah Barang. Kolom yang ada dalam daftar barang yaitu nomor part, deskripsi barang, harga barang dan perbarui. jumlah jenis barang dengan rincian yang berisi nomor part, deskripsi barang, dan harga. Pada menu Daftar Stok akan menampilkan jumlah semua stok barang yang telah didaftarkan. Pada menu Daftar Simpart akan menampilkan *Standard Item Minimum* yang telah ditetapkan oleh AHM. Jumlah barang yang ratusan jenis membuat sistem ini sangat berguna karena mampu meminimalisir kesalahan dalam pembelian rutin stok *spare parts* tiap bulannya. Perubahan banyaknya stok juga dapat dilakukan dengan mengisi detail yang ada di proses Perbarui Stok. Tampilan halaman Daftar Stok dapat dilihat pada gambar 5.4

Gambar 5.4 Halaman Daftar Stok

3. Halaman Menu Laporan

Untuk memudahkan proses peramalan, maka admin cukup mengunggah laporan bulanan dari hasil penjualan *spare parts* yang kemudian diinput ke laman Laporan. Untuk meramalkan stok *spare parts* bulan depan, maka dibutuhkan data historis enam bulan kebelakang. Data ditarik setiap akhir bulannya karena jadwal pemesanan *spare part* harus diajukan tiap awal bulan ke Astra Motor Sumsel.

AHASS

9	Oktober	2021	25 Oktober 2021

Laporan Bulanan

Gambar 5.5 Halaman Daftar Laporan

4. Halaman Menu Suggestion

Bila admin telah memenuhi laporan bulanannya, maka akan terlampir daftar *spare parts* apa saja yang perlu dibeli berdasarkan peramalan menggunakan *Exponential Smoothing*. Terdapat kolom *minimum order* dan *minimum suggestion order* dimana hal ini berkaitan dengan regulasi *Standard Item Minimum (SIM) Parts* yang harus dipenuhi oleh bengkel. Sedangkan *suggestion order* adalah angka yang muncul dari proses peramalan berdasarkan data enam bulan terakhir yang telah terdaftar di laporan bulanan. Agar admin tidak perlu membuat laporan terpisah, maka terdapat menu *Generate Suggestion* dimana laporan *suggestion order* yang tampil di *export ke Microsoft Excel* dan siap diajukan ke *main dealer* sebagai daftar stok *spare parts* yang ingin dibeli. Maka dengan sistem informasi ini diharapkan dapat mengurangi kesalahan pemesanan *spare parts* dan jika proses ini harus dilakukan oleh orang lain/ orang baru, maka hal ini sudah tidak menjadi kendala. Sistem informasi ini dibuat untuk AHASS Bintang Mulia Jaya Motor namun juga dapat digunakan oleh semua AHASS. Salah satu upaya untuk menjaga *service level* ialah dengan mengoptimalkan persediaan *spare parts* yang diharapkan berbanding lurus dengan kepuasan serta loyalitas konsumen.

5. Halaman Pengguna dan Profil

Pada halaman pengguna, terdapat informasi *user* yang menampilkan nama, email, nomor telepon, pekerjaan dan waktu terdaftar. *User* dapat ditambah dengan memilih menu *edit user* ataupun dihapus dengan memilih menu *delete user*. Halaman ubah profile diperuntukkan mengubah biodata ataupun *password* dari *user*. Gambar halaman pengguna dan halaman profile dapat dilihat pada gambar 5.7 dan 5.8.

Gambar 5.7 Halaman Pengguna

Gambar 5.8 Halaman Profile

5.2 Validasi Dashboard

Pada penelitian ini program diterapkan pada *part man*, kepala bengkel AHASS Bintang Mulia Jaya Motor Palembang dan *regulator* dari Astra Motor Sumsel (*main dealer*) pada tanggal 21 dan 22 Juli 2022. Proses validasi *dashboard* yaitu pengujian *User Acceptance Test* (UAT) dilakukan pengambilan data terhadap tiga orang *user* yang diberikan pertanyaan sesuai dengan keinginan mereka pada saat wawancara awal. Rekapitulasi hasil test dapat dilihat pada tabel 4.8. Tahap awal yaitu melakukan penjelasan dan demo program pada pengguna lalu pengguna melakukan uji coba tahapan

seperti yang sudah dijelaskan. Berdasarkan percobaan, program berjalan sesuai dengan kinerja yang diharapkan. *Interface* yang diusulkan mudah dimengerti dan tidak membutuhkan waktu yang lama untuk dimengerti. Hasil dari uji usability menunjukkan bahwa *user* merasa mudah dan efektif dengan adanya *dashboard* yang diusulkan. Tampilan utama dari *dashboard* juga dirasa mudah untuk dipahami dan dianalisis karena terbantu dengan tampilan warna merah, kuning dan hijau. Tujuan dari dashboard yang diharapkan dapat membantu kerja *user* sudah sesuai dengan yang dibutuhkan. Hal tersebut diatas selaras dengan hasil persentase rata – rata hasil UAT yaitu sebesar 98%.

BAB 6

SIMPULAN DAN SARAN

6.1 Simpulan

Berdasarkan hasil pengolahan data dan perencanaan desain *dashboard* manajemen persediaan *spare parts* sepeda motor Honda diperoleh kesimpulan sebagai berikut:

1. Manajemen persediaan *spare parts* khususnya untuk pemesanan stok *spare parts* tiap bulannya menggunakan peramalan kualitatif yaitu berdasarkan pengalaman/ opini personel saja.
2. Usulan desain dashboard manajemen persediaan *spare parts* sepeda motor Honda adalah pada Gambar 4.4.
3. Usulan keseluruhan desain dashboard mendapatkan hasil persentase rata-rata *User Acceptance Test* (UAT) sebesar 98%. Program mudah dipahami dan sesuai dengan yang dibutuhkan. Hasil analisis pada dashboard membantu dalam proses pengambilan keputusan pemesanan rutin stok *spare parts* yang pastinya juga membantu kerja *user*. Serta tampilan yang menarik dan *user friendly*.

6.2 Saran

Adapun saran yang dapat dilakukan untuk penelitian selanjutnya adalah lebih memaksimalkan *service level* dengan membuat sistem berjalan *online* dan terkoneksi dengan sesama AHASS, maka diharapkan kerjasama antar AHASS dapat saling mencegah *stock out spare part*. Pengembangan sistem selanjutnya juga dapat ditambahkan uji *Technology Accepted Model* (TAM) untuk memperkuat validasi program.
