

*Correlation Between Death Attitude And Religiosity In Adults*

Luthfi Aditya Yudistira Carera Budi Satria Wibawa

*ABSTRACT*

*This study examines whether religiosity and death attitude have a significant positive relationship. Deaths increased when the COVID-19 pandemic became a concern where giving the wrong attitude towards death would have a negative impact on a person's psychological health. Participants (N=89) who met the criteria completed the DAR (Death Attitude Revised) questionnaire and The Big Four Religiosity Dimensions. The results of the correlational test show that religiosity and attitudes toward death have a positive relationship. Furthermore, the dimensions of religiosity also have a significant relationship with death attitude. Several literatures support the findings of this study and suggest that individuals to increase their religiosity by studying religion.*

*Keywords: death, religiosity, culture*

Korelasi Antara Sikap Terhadap Kematian dan Religiositas Pada Dewasa

ABSTRAK

Penelitian ini menguji apakah religiositas dan sikap terhadap kematian memiliki hubungan positif yang signifikan. Pada pandemi COVID-19 lalu, kematian meningkat sehingga menjadi perhatian dimana memberikan sikap yang salah terhadap kematian akan berdampak buruk bagi kesehatan psikologis seseorang. Partisipan (N=89) yang memenuhi kriteria menyelesaikan kuesioner DAR (*Death Attitude Revised*) dan *The Big Four Religiosity Dimensions*. Hasil uji korelasi menunjukkan bahwa religiositas dan sikap terhadap kematian memiliki hubungan yang positif. Selanjutnya dimensi religiositas juga memiliki hubungan yang signifikan dengan sikap kematian. Beberapa literatur mendukung temuan penelitian ini dan menyarankan agar individu meningkatkan religiositasnya dengan mempelajari agama.
