

Kelekatan Orang Tua Dan Kecerdasan Emosi Pada Mahasiswa Di Yogyakarta

Fitri Khofifah

Fani Eka Nurtjahjo

ABSTRAK

Penelitian ini bertujuan untuk mengetahui bagaimana hubungan antara kelekatan orang tua dengan kecerdasan emosi. Penelitian ini menggunakan dua skala, yaitu (a) Skala *Trait Emotional Intelligence Questionnaire- Adolescent Short Form* (TEIQue- ASF) dari Petrides dengan $\alpha = 0,909$ dan (b) Skala parent attachment (ayah 25 aitem) dan (ibu 25 aitem) yang dibuat Amsden dan Greenberg (2009) dari teori IPPA (*Inventory of Parent and Peer Attachment*) dengan $\alpha = 0,925$ (ayah) dan $\alpha = 0,896$ (ibu). Hasil analisis data menggunakan teknik korelasi Product Moment Spearman menunjukkan bahwa ada hubungan positif antara kelekatan orangtua dengan kecerdasan emosi $r = 0.256$ (ayah) $r = 0.287$ (ibu) dengan $p = 0.001$ (ayah) $p = 0.001$ (ibu) ($p < 0,05$). Berdasarkan hasil penelitian, maka hipotesis pada penelitian ini diterima.

ABSTRACT

This research aims to find out the relationship between parental attachment and emotional intelligence. This study used two scales, namely (a) the Trait Emotional Intelligence Questionnaire- Adolescent Short Form (TEIQue-ASF) scale from Petrides with $\alpha = 0.909$ and (b) the parent attachment scale (father 25 items) and (mother 25 items) which were created Amsden and Greenberg (2009) from the IPPA (Inventory of Parent and Peer Attachment) theory with $\alpha = 0.925$ (father) and $\alpha = 0.896$ (mother). The results of data analysis using Spearman's Product Moment correlation technique show that there is a positive relationship between parental attachment and emotional intelligence $r = 0.256$ (father) $r = 0.287$ (mother) with $p = 0.001$ (father) $p = 0.001$ (mother) ($p < 0, 05$). Based on the research results, the hypothesis in this study is accepted.
