

CHAPTER VI

CONCLUSION AND SUGGESTION

This chapter discusses about the conclusion and suggestion of this research. All sub chapters will be explained as follows:

6.1 Conclusion

Based on the explanation in previous chapter, it can be concluded as:

The system for Smart phone product is well developed and provides accuracy as high as 90.48%. The proposed FAM system able to assist in selecting proper smart phone with twelve linguistic variables in product alternatives, with the error before optimization there are 40 and after optimization decreased into 4.

6.2 Suggestion

Suggestions from this research are:

1. For future studies it is necessary to find different product that use by so many users such as Notebook and Printer.
2. Expected to add other variables of Smart phone product specification and characteristics.
