HALAMAN PERSETUJUAN PEMBIMBING ........................................ iii
HALAMAN PENGESAHAN ............................................................... iv
KATA PENGANTAR .................................................................. v
DAFTAR ISI .............................................................................. viii
DAFTAR GAMBAR ...................................................................... xii
DAFTAR LAMPIRAN .................................................................. xiv
PERNYATAAN .......................................................................... xv
INTISARI ................................................................................ xvi
ABSTRACT ............................................................................. xvii

## BAB I PENDAHULUAN ................................................................. 1
  1.1. Latar Belakang ................................................................ 1
  1.2. Rumusan Masalah ....................................................... 4
  1.3. Batasan Masalah .......................................................... 4
  1.4. Tujuan Penelitian ......................................................... 5
  1.5. Manfaat Penelitian ...................................................... 5

## BAB II TINJAUAN PUSTAKA ...................................................... 6
  2.1. Penelitian Mengenai Analisis QTL ................................ 6
  2.2. Penelitian QTL Pada Jamur *Phytophthora capsici* ........ 8
  2.3. Penelitian QTL Menggunakan R .................................... 10

## BAB III LANDASAN TEORI ....................................................... 14
  3.1. Botani Tanaman Cabai ..................................................... 14
    3.1.1. Taksonomi ............................................................. 14
    3.1.2. Morfologi ............................................................. 14
  3.2. *Phytophthora capsici* .................................................. 15
  3.3. Genotipe dan Fenotipe ................................................... 15
  3.4. Pemuliaan Tanaman ....................................................... 16
  3.5. Teknik Molekuler ........................................................ 16
    3.5.1 Pengertian Teknik Molekuler ................................. 16
3.5.2 Marker Assisted Selection ................................................................. 17
3.5.3 Single Nucleotide Polymorphism ....................................................... 19
3.6 Quantitative Trait Loci (QTL) ............................................................... 20
  3.6.1 Pengertian QTL .................................................................................. 20
  3.6.2 Peta Pautan Genetik ......................................................................... 21
  3.7.2.1 Fungsi Pemetaan Haldane .............................................................. 23
  3.7.2.2 Fungsi Pemetaan Kosambi .............................................................. 24
  3.6.3 Pemeriksaan Data ............................................................................. 25
  3.7.3.1 Analisis Segregasi dengan Uji Mendelian Chi-squared $\chi^2$ ....... 26
  3.7.3.2 Frekuensi Rekombinasi ................................................................. 26
  3.7.3.3 Identifikasi Kesalahan Genotyping (Broman & Sen, 2009) ......... 27
  3.7.3.4 Missing Information Genotype (Broman & Sen, 2009) ............ 27
  3.6.4 Marker Regression (Broman & Sen, 2009) ....................................... 28
  3.6.5 Interval Mapping (Broman & Sen, 2009) .......................................... 29
  3.7.5.1 Standard Interval Mapping (Broman & Sen, 2009) .................... 30
  3.7.5.2 Haley-Knott Regression (Broman & Sen, 2009) ....................... 31
  3.7.5.3 Extended Haley-Knott Regression (Broman & Sen, 2009) ....... 31
  3.7.5.4 Multiple Imputation (Broman & Sen, 2009) ............................. 32
3.8 Analisis Cluster (Laeli, 2014) ............................................................... 33
  3.8.1 Jarak Euclidean (Laeli, 2014) .......................................................... 33
  3.8.2 Metode Ward (Laeli, 2014) ............................................................... 33
3.9 Software R ............................................................................................ 34

BAB IV METODOLOGI PENELITIAN ......................................................... 35
  4.1 Tempat dan Waktu Penelitian ............................................................. 35
  4.2 Sumber Data ....................................................................................... 35
  4.3 Metode Analisis Data ........................................................................... 35
  4.4 Variabel dan Definisi Operasional Variabel ...................................... 35
  4.5 Langkah Penelitian ............................................................................. 37

BAB V ANALISIS DAN PEMBAHASAN .................................................. 40
  5.1 Impor data ke Direktori Kerja R ......................................................... 40
  5.2 Ringkasan dan Struktur Data ............................................................. 42
  5.3 Uji Mendelian Chi-Squared $\chi^2$ ......................................................... 44
5.4. Pohon Filogenetik ................................................................. 48
5.5. Frekuensi Rekombinasi ......................................................... 51
5.6. Pemeriksaan Kesalahan Genotyping ....................................... 53
5.7. Menghitung Missing Information Genotyping .......................... 56
5.8. Analisis QTL .................................................................... 58
5.9.1. Regresi Marka (Marker Regression) ................................. 58
5.9.2. Pemetaan Interval (Interval Mapping) ............................... 59
5.9.3. Pemilihan Model ........................................................... 65
5.9.4. Uji Normalitas Data Residual ........................................... 69
5.9.5. Interpretasi Model ........................................................... 73
BAB VI PENUTUP .................................................................... 75
6.1. Kesimpulan ........................................................................ 75
6.2. Saran ................................................................................. 76
DAFTAR PUSTAKA ................................................................. 77
LAMPIRAN ............................................................................ 82
